Objectives:

At the end of this activity, the students will be able to:

- Explain the significance of the cell as the fundamental unit of life.
- Describe and identify the unique features of a prokaryotic cell.
- Describe and identify the unique features of an animal cell.
- Describe the roles of the organelles in these cells.

The cell is the basic structural and functional unit of life. It has all the main structures to perform the basic activities to keep it alive: nutrition, respiration, responsiveness, reproduction, growth and adaptability.

The cells are either prokaryotic, meaning they have no membrane bound nucleus or they are eukaryotic, which have a membrane bound nucleus. There are however, more differences between prokaryotic and eukaryotic cells. The cell is made of protoplasm; its living portion. The protoplasm is organized into a nucleus and the cytoplasm.

Questions to answer:

1) What is the importance of a microscope in the study of the cell structures? (3 pts)

2) What organelles are present in plant but not in animal cells? (3 pts)
