Underlined words and phrases are to be filled in by students on the Note-taking Worksheet.

A. Properties of Earth—people used to think that Earth was flat and at the center of the universe.

1. Earth is now known to be a round, three-dimensional sphere.
 - a. Axis—imaginary vertical line around which Earth spins
 - b. Rotation—the spinning of Earth around its axis that causes day and night
2. Earth has a magnetic field with north and south poles.
3. Magnetic axis—imaginary line joining Earth's magnetic poles
 - a. Earth's magnetic axis does not align with its rotational axis.
 - b. The location of magnetic poles slowly changes over time.

B. Causes of seasons

1. Revolution—Earth's yearly orbit around the Sun
 - a. Earth's orbit is an ellipse, or elongated, closed curve.
 - b. Because the Sun is not centered in the ellipse, the distance between Earth and the Sun changes during the year.
2. Earth's tilt causes seasons.
 - a. The hemisphere tilted toward the Sun receives more daylight hours than the hemisphere tilted away from the Sun.
 - b. The longer period of sunlight is one reason summer is warmer than winter.
3. Earth's tilt causes the Sun's radiation to strike the hemispheres at different angles.
 - a. The hemisphere tilted toward the Sun receives more total solar radiation than the hemisphere tilted away from the Sun.
 - b. In the hemisphere tilted toward the Sun, the Sun appears high in the sky and the radiation strikes Earth more directly.

C. Solstice—the day when the Sun reaches its greatest distance north or south of the equator

1. Summer solstice occurs June 21 or 22 in the northern hemisphere.
2. Winter solstice occurs December 21 or 22 in the northern hemisphere.

D. Equinox—the day when the Sun is directly over Earth's equator

The Earth-Moon System as a Dynamical Laboratory Elisa Maria Alessi, Josep Masdemont, Alessandro Rossi, 2019-09-25
The Earth Moon neighborhood is the scene of a large variety of applications that concern asteroids lunar exploration and space debris in Earth orbit In particular recent efforts by the scientific community have focused on the possibility of extending the human operations beyond the radiation belts of exploiting in situ resources either on the lunar surface or on asteroids retrieved to the vicinity of the Earth and of mitigating the space debris concern by taking advantage of the lunar perturbation The characteristic dynamics in the cislunar space represents an opportunity for the mission designer but also a challenge in terms of theoretical understanding and operational control This Research Topic covers the Earth Moon dynamics in its complexity and allure considering the most relevant aspects for both natural and artificial objects in order to get a new comprehension of the dynamics at stake along with the operational procedures that can handle it *Publications of Goddard Space Flight Center* Goddard Space Flight Center, **Scientific and Technical Aerospace Reports**, 1989

computational physicists and aerospace engineers Abstracts of Theses University of Chicago,1925 *Extraterrestrial Influence on Climate Change* Saumitra Mukherjee,2012-08-21 Climate change has been addressed since last decade based on the influence of human activities like production of industrial effluents land use changes and other activities due to development of the society These are very important issues no doubt but the activities due to the influence of extraterrestrial phenomena have not been given its due importance An attempt is being made here to understand the influence of extraterrestrial activities as one of the important factors of climate change has been attempted here The influence of Sun and distant stars on the environment of the earth has been studied during the cyclic changes in the Sun as well as episodic changes in the environment due to the effect of other celestial objects in between Sun Earth environment The study has been carried out based on the changes within the Sun as well as changes during the solar eclipse During these extraterrestrial changes it has been observed that the earth changes in its atmosphere as well as geosphere which may have local effect but the increase of these local effect in large scale may contribute to the climate change Solar radiation drives atmospheric circulation Since solar radiation represents almost all the energy available to the Earth accounting for solar radiation and how it interacts with the atmosphere and the Earth s surface is fundamental to understanding the Earth s energy budget

Chaos in the Cosmos Barry R. Parker,2013-11-11 he year was 1889 The French physicist mathematician Henry T Poincare could not believe his eyes He had worked for months on one of the most famous problems in science the problem of three bodies moving around one another under mutual gravitational attraction and what he was seeing dismayed and troubled him Since Newton's time it had been assumed that the problem was solvable All that was needed was a little ingenuity and considerable perseverance but Poincare saw that this was not the case Strange unexplainable things happened when he delved into the problem it was not solvable after all Poincare was shocked and dismayed by the result so disheartened he left the problem and went on to other things What Poincare was seeing was the first glimpse of a phenomenon we now call chaos With his discovery the area lay dormant for almost 90 years Not a single book was written about the phenomenon and only a trickle of papers appeared Then about 1980 a resurgence of interest began and thousands of papers appeared along with dozens of books The new science of chaos was born and has attracted as much attention in recent years as breakthroughs in superconductivity and superstring theory

Classical Mechanics Illustrated by Modern Physics David Guery-Odelin,Thierry Lahaye,2010 In many fields of modern physics classical mechanics plays a key role This book provides an illustration of classical mechanics in the form of problems at the bachelor level inspired for most of them by contemporary research in physics and resulting from the teaching and research experience of the authors

The Janus Point Julian Barbour,2020-12-01 In a universe filled by chaos and disorder one physicist makes the radical argument that the growth of order drives the passage of time and shapes the destiny of the universe Time is among the universe's greatest mysteries Why when most laws of physics allow for it to flow forward and backward does it only go forward Physicists have long appealed to the second law of thermodynamics held to predict the increase of disorder in the universe to explain this In The Janus Point physicist Julian Barbour argues that the second law has been misapplied and that the growth of order determines how we experience time In his view the big bang

becomes the Janus point a moment of minimal order from which time could flow and order increase in two directions The Janus Point has remarkable implications while most physicists predict that the universe will become mired in disorder Barbour sees the possibility that order the stuff of life can grow without bound A major new work of physics The Janus Point will transform our understanding of the nature of existence *Astronomical Papers* ,1966 Project STAR Harold P. Coyle,2001 The Universe in Your Hands Project STAR Science Teaching through its Astronomical Roots is an astronomy course that also teaches real world math and physics Project STAR capitalizes on students inherent interest in the limitless universe that surrounds them This second edition uses a new approach that is consistent with the philosophy of the authors students learn science better by making measurements and observations than by memorizing facts Each chapter begins with questions to test preheld views on certain subjects Students then use measurements and observations to explore the models in the chapters Questions are sprinkled throughout the book to test understanding along with cartoons to lighten the learning with humor Hands on activities play an essential role in this 1 year course In completing these hands on activities students will make observations of the skies build models use models to explain observations and make predictions find everyday applications for such models The Student Text for Project STAR Second Edition includes updated information is easier to use and visually more appealing The material is laid out with new illustrations for greater clarity and understanding A color plate section supports activities and text related to the study of spectra A reference section has also been added It lists astronomy resources on the web The Astronomy Explorer CD ROM is included with the Student Text This interactive CD ROM contains movies and animations related to astronomy The student exercises provide an excellent foundation for understanding the complexities of the universe A glossary of terms is also part of the CD **In Quest of the Universe** Theo Koupelis,Karl F. Kuhn,2007 New to this Edition A new chapter on the Night Sky urges students to become backyard astronomers and observe the sky on multiple clear nights while taking note of the patterns of the positions of stars and planets New to this
