Fusion of Atomic Nuclei M. Beckerman, 1985

*Structure of Atomic Nuclei and Nuclear Transformations* George

Gamow, 1949 *Nuclear Fusion and Fission* Fiona Young-Brown, 2016-07-15 Nuclear Fusion and Fission delves into nuclear physics and the scientists responsible for the discovery of splitting and fusing an atom The book begins with the very basic building blocks of science breaking down the different types of energy and how we use them the materials that make up an atom and our search for the perfect renewable energy source Set against the cultural backdrop of World War II later chapters follow each significant theory that led to the creation of the world s most dangerous weapon as well as some of its most widely used medical and food production processes today Knowing the Atomic Nucleus R. Hobart Ellis, 1973

Describes the discovery nature and potential of the atomic nucleus with explanations of atomic structure and behavior radioactivity fission and fusion

**Splitting the Atom** Alan Morton, 2005-12-15 Discusses the discovery of the atom and its parts the development of nuclear fission in laboratories and how nuclear fission can be and has been used for **The Curve**

**of Binding Energy** Paul F. Kisak, 2016-05-31 Nuclear binding energy is the energy that would be required to disassemble the nucleus of an atom into its component parts These component parts are neutrons and protons which are collectively called nucleons The binding energy of nuclei is due to the attractive forces that hold these nucleons together and this is usually a positive number since most nuclei would require the expenditure of energy to separate them into individual protons and neutrons The mass of an atomic nucleus is usually less than the sum of the individual masses of the constituent protons and neutrons according to Einstein s equation  $E = mc^2$  and this missing mass is known as the mass defect and represents the

energy that was released when the nucleus was formed. The term nuclear binding energy may also refer to the energy balance in processes in which the nucleus splits into fragments composed of more than one nucleon. If new binding energy is available when light nuclei fuse or when heavy nuclei split, either process can result in release of this binding energy. This energy may be made available as nuclear energy and can be used to produce electricity as in nuclear power or in a nuclear weapon. When a large nucleus splits into pieces, excess energy is emitted as photons (gamma rays) and as the kinetic energy of a number of different ejected particles (nuclear fission products). The nuclear binding energies and forces are on the order of a million times greater than the electron binding energies of light atoms like hydrogen. The mass defect of a nucleus represents the mass of the energy of binding of the nucleus and is the difference between the mass of a nucleus and the sum of the masses of the nucleons of which it is composed.
