2dse Paper Physics:

Physics of Hot Electron Transport in Semiconductors Chin Sen Ting, 1992 This review volume is based primarily on the balance equation approach developed since 1984 It provides a simple and analytical description about hot electron transport particularly in semiconductors with higher carrier density where the carrier carrier collision is much stronger than the single particle scattering The steady state and time dependent hot electron transport thermal noise hot phonon effect the memory effect and other related subjects of charge carriers under strong electric fields are reviewed The application of Zubarev's nonequilibrium statistical operator to hot electron transport and its equivalence to the balance equation method are also presented For semiconductors with very low carrier density the problem can be regarded as a single carrier transport which will be treated non perturbatively by the nonequilibrium Green's function technique and the path integral theory The last part of this book consists of a chapter on the dynamic conductivity and the shot noise suppression of a double carrier resonant tunneling system Soviet Physics, JETP. ,1972 Soviet Journal of Nuclear Physics ,1987 **Soviet Physics, Solid State** ,1969 Japanese Journal of Applied Physics ,1982 **Theoretical and Mathematical Physics** ,1995
