**Abstract**— Ethical hacking, also known as penetration testing or intrusion testing or red teaming has become a major concern for businesses and governments. Companies are worried about the possibility of being “hacked” and potential customers are worried about maintaining control of personal information. [1] This paper describes ethical hackers: their skills, their attitudes, and how they go about helping their customers find and plug up security holes. The ethical hacking process is explained, along with many of the challenges and opportunities in the field of ethical hacking.

**Index Terms**—Ethical hacking, vulnerability analysis, exploitation, information gathering, information security.

## I. INTRODUCTION

The term “hacker” has a dual usage in the computer industry today. Originally, the term was defined as:

“A person who enjoys learning the details of computer systems and how to stretch their capabilities—as opposed to most users of computers, who prefer to learn only the minimum amount necessary. One who programs enthusiastically or who enjoys programming rather than just theorizing about programming”.

This complimentary description was often extended to the verb form “hacking,” which was used to describe the rapid crafting of a new program or the making of changes to existing, usually complicated software.

Because of the increasing popularity of computers and their continued high cost, access to them was usually restricted. When refused access to the computers, some users would challenge the access controls that had been put in place. They would steal passwords or account numbers by looking over someone's shoulder, explore the system for bugs that might get them past the rules, or even take control of the whole system. They would do these things in order to be able to run the programs of their choice, or just to change the limitations under which their programs were running.

Initially these computer intrusions were fairly benign, with the most damage being the theft of computer time. Other times, these recreations would take the form of practical jokes. However, these intrusions did not stay benign for long. Occasionally the less talented, or less careful, intruders would accidentally bring down a system or damage its files, and the system administrators would have to restart it or make repairs. Other times, when these intruders were again denied access once their activities were discovered, they would react with purposefully destructive actions. When the number of these destructive computer intrusions became noticeable, due to the visibility of the system or the extent of the damage inflicted, it became “news” and the news media picked up on the story. Instead of using the more accurate term of “computer criminal,” the media began using the term “hacker” to describe individuals who break into computers for fun, revenge, or profit. Since calling someone a “hacker” was originally meant as a compliment, computer security professionals prefer to use the term “cracker” or “intruder” for those hackers who turn to the dark side of hacking. For clarity, we will use the explicit terms “ethical hacker” and “criminal hacker” for the rest of this paper.
