Introduction to Information Behaviour Nigel Ford, 2015-08-27 This landmark textbook is an essential primer for students and practitioners interested in information seeking needs and behaviour user studies and information literacy Introduction to Information Behaviour uses a combination of theory and practical context to map out what information behaviour is and what we currently know about it before addressing how it can be better understood in the future Nigel Ford argues that new understandings of information behaviour research may help maximise the quality and effectiveness of the way information is presented sought discovered evaluated and used The book introduces the key concepts issues and themes of information behaviour illustrates them using key research studies and provides a clear path through the complex maze of theories and models The book is structured to move from the basics to the more complex and employs the pedagogical device of THINK boxes which invite the reader to think about concepts as they are introduced in order to consolidate their understanding before moving on Case studies are included throughout the text and each chapter concludes with a round up of what has been covered highlighting the implications for professional information practice The key topics covered include Defining information behaviour and why is it useful to know about it Information needs Information seeking and acquisition Collaborative information behaviour Factors affecting information behaviour Models and theories of information behaviour Research approaches and methodologies Designing information

systems The future trajectory of information behaviour research and practice Readership This book will be core reading for students around the world particularly those on library and information science courses It will also be of interest to practitioners and professional information users providers and developers

The Solar Activity Cycle André Balogh, Hugh Hudson, Kristóf Petrovay, Rudolf Steiger, 2015-04-16 A collection of papers edited by four experts in the field this book sets out to describe the way solar activity is manifested in observations of the solar interior the photosphere the chromosphere the corona and the heliosphere The 11 year solar activity cycle more generally known as the sunspot cycle is a fundamental property of the Sun This phenomenon is the generation and evolution of magnetic fields in the Sun s convection zone the photosphere It is only by the careful enumeration and description of the phenomena and their variations that one can clarify their interdependences The sunspot cycle has been tracked back about four centuries and it has been recognized that to make this data set a really useful tool in understanding how the activity cycle works and how it can be predicted a very careful and detailed effort is needed to generate sunspot numbers This book deals with this topic together with several others that present related phenomena that all indicate the physical processes that take place in the Sun and its exterior environment The reviews in the book also present the latest theoretical and modelling studies that attempt to explain the activity cycle It remains true as has been shown in the unexpected characteristics of the first two solar cycles in the 21st century that predictability remains a serious challenge Nevertheless the highly expert and detailed reviews in this book using the very best solar observations from both ground and space based telescopes provide the best possible report on what is known and what is yet to be discovered Originally published in Space Science Reviews Vol 186 Issues 1 4 2014 Tsunamis E.M. Scourse, N.A. Chapman, D.R. Tappin, S.R. Wallis, 2018-01-05 This Special Publication examines tsunami hazard and risk with particular focus on using the geological record With Earth s growing population clustered increasingly on coastlines tsunami hazards are of concern worldwide The papers explore the sedimentological and dynamic traces of recent and prehistoric tsunamis globally from Europe to the Pacific as well as looking at historic records and how the information can be used to characterise the scale of impacts and areas that are most susceptible to tsunami hazards Armed with this information scientists can begin to quantify risks both to populations and in economic terms This volume is aimed both at scientists working in this field and at a wider community interested in tsunami science and natural hazard assessment Global Developments in Literacy Research for Science Education Kok-Sing Tang, Kristina Danielsson, 2018-01-19 This book highlights recent developments in literacy research in science teaching and learning from countries such as Australia Brazil China Finland Germany Hong Kong New Zealand Norway Singapore Spain South Africa Sweden Taiwan and the United States It includes multiple topics and perspectives on the role of literacy in enhancing science teaching and learning such as the struggles faced by students in science literacy learning case studies and evaluations of classroom based interventions and the challenges encountered in the science classrooms It offers a critical and comprehensive investigation on numerous

emerging themes in the area of literacy and science education including disciplinary literacy scientific literacy classroom discourse multimodality language and representations of science and content and language integrated learning CLIL The diversity of views and research contexts in this volume presents a useful introductory handbook for academics researchers and graduate students working in this specialized niche area With a wealth of instructional ideas and innovations it is also highly relevant for teachers and teacher educators seeking to improve science teaching and learning through the use of literacy

What levels of explanation in the behavioural sciences? Giuseppe Boccignone,Roberto Cordeschi,2015-07-03 Complex systems are to be seen as typically having multiple levels of organization For instance in the behavioural and cognitive sciences there has been a long lasting trend promoted by the seminal work of David Marr putting focus on three distinct levels of analysis the computational level accounting for the What and Why issues the algorithmic and the implementational levels specifying the How problem However the tremendous developments in neuroscience knowledge about processes at different scales of organization together with the complexity of today cognitive theories suggest that there will hardly be only three levels of explanation Instead there will be many different degrees of commitments corresponding to the different granularities from high level behavioural models to low level neural and molecular models of the cognitive research program For instance Bayesian approaches that are usually advocated for formalizing Marr s computational level and rational behaviour have even been adopted to model synaptic plasticity and axon guidance by molecular gradients As a result we can consider the behavioural scientist as dealing with models at a multiplicity of levels The purpose of this Research Topic in Frontiers in Theoretical and Philosophical Psychology is to promote an approach to the role of the levels and explanation and models

which is of interest for cognitive scientists neuroscientists psychologists behavioural scientists and philosophers of science

Nanoelectronics for Next-Generation Integrated Circuits Rohit Dhiman,2022-11-23 The incessant scaling of complementary metal oxide semiconductor CMOS technology has resulted in significant performance improvements in very large scale integration VLSI design techniques and system architectures This trend is expected to continue in the future but this requires breakthroughs in the design of nano CMOS and post CMOS technologies Nanoelectronics refers to the possible future technologies beyond conventional CMOS scaling limits This volume addresses the current state of the art nanoelectronic technologies and presents potential options for next generation integrated circuits Nanoelectronics for Next generation Integrated Circuits is a useful reference guide for researchers engineers and advanced students working on the frontier of the design and modeling of nanoelectronic devices and their integration aspects with future CMOS circuits This comprehensive volume eloquently presents the design methodologies for spintronics memories quantum dot cellular automata and post CMOS FETs including applications in emerging integrated circuit technologies [Einstein's Unfinished Revolution](#) Lee Smolin,2019-04-09 A daring new vision of the quantum universe and the scandals controversies and questions that may illuminate our future from Canada's leading mind on contemporary physics Quantum physics is the golden child of modern science It is the basis of our understanding of atoms radiation and so much else from elementary particles and basic forces to the behaviour of materials But for a century it has also been the problem child of science plagued by intense disagreements between its intellectual giants from Albert Einstein to Stephen Hawking over the strange paradoxes and implications that seem like the stuff of fantasy Whether it's Schrödinger's cat a creature that is simultaneously dead and alive or a belief that the world does not exist independently of our observations of it quantum theory is what challenges our fundamental assumptions about our reality In Einstein's Unfinished Revolution globally renowned theoretical physicist Lee Smolin provocatively argues that the problems which have bedeviled quantum physics since its inception are unsolved for the simple reason that the theory is incomplete There is more waiting to be discovered Our task if we are to have simple answers to our simple questions about the universe we live in must be to go beyond it to a description of the world on an atomic scale that makes sense In this vibrant and accessible book Smolin takes us on a journey through the basics of quantum physics introducing the stories of the experiments and figures that have transformed the field before wrestling with the puzzles and conundrums that they present Along the way he illuminates the existing theories about the quantum world that might solve these problems guiding us toward his own vision that embraces common sense realism If we are to have any hope of completing the revolution that Einstein began nearly a century ago we must go beyond quantum mechanics as we know it to find a theory that will give us a complete description of nature In Einstein's Unfinished Revolution Lee Smolin brings us a step closer to resolving one of the greatest scientific controversies of our age **Autoethnography for Librarians and Information Scientists** Ina Fourie,2021-06-24 Autoethnography for Librarians and Information Scientists illustrates that

autoethnography is a rich qualitative research method that can enhance understanding of one's own work experiences whilst also facilitating the design of tailored experiences for a variety of audiences. Starting with the position that librarians and information scientists require deep insight into people's experiences, needs and information behaviour in order to design appropriate services and information interventions, this book shows that using only conventional methods such as questionnaires and focus groups is insufficient. Arguing that autoethnography can provide unique insights into users' cultural experiences and needs, contributors to this volume introduce the reader to different types of autoethnography. Highlighting common challenges and clarifying how autoethnography can be combined with other research methods, this book will empower librarians and information scientists to conceptualise topics for autoethnographic research whilst also ensuring that they adhere to strict ethical guidelines. Chapters within the volume also demonstrate how to produce autoethnographic writing and stress the need to analyse autoethnographies produced by others. *Autoethnography for Librarians and Information Scientists* is essential reading for any librarian, information scientist or student looking to deepen their understanding of their own experiences. It will be particularly useful to those engaged in the study of service provision, user studies and information behaviour. **Canadian Journal of Physics**, 2015

Handbook on Green Infrastructure Danielle Sinnett, Nick Smith, Sarah Burgess, 2015-11-27. Green infrastructure encompasses many features in the built environment. It is widely recognised as a valuable resource in our towns and cities and it is therefore crucial to understand, create, protect and manage this resource. This Handbook sets the context for green infrastructure as a means to make urban environments more resilient, sustainable, liveable and equitable. Including state-of-the-art reviews that summarise the existing knowledge as well as research findings, this Handbook provides current evidence for the beneficial impact of green infrastructure on health, environmental quality and the economy. It discusses the planning and design of green infrastructure as a strategic network down to the individual features in a neighbourhood and looks at the process of green infrastructure implementation, emphasising the importance of collaboration across multiple professions and sectors. This comprehensive volume operates at multiple spatial scales from strategic networks at the regional level to individual features in neighbourhoods with international case studies used throughout to illustrate key examples of good practice. This collection of expert contributions will be invaluable to students and academics in the fields of planning, urban studies and geography. Practitioners and policy makers will also find the policy discussion and examples enlightening. **Lie Theory and Its Applications in Physics** Vladimir Dobrev, 2016-12-10. This volume presents modern trends in the area of symmetries and their applications based on contributions from the workshop *Lie Theory and Its Applications in Physics* held near Varna, Bulgaria, in June 2015. Traditionally, Lie theory is a tool to build mathematical models for physical systems. Recently, the trend has been towards geometrization of the mathematical description of physical systems and objects. A geometric approach to a system yields, in general, some notion of symmetry which is very helpful in understanding its structure. Geometrization and symmetries are

employed in their widest sense embracing representation theory algebraic geometry number theory infinite dimensional Lie algebras and groups superalgebras and supergroups groups and quantum groups noncommutative geometry symmetries of linear and nonlinear partial differential operators PDO special functions and others Furthermore the necessary tools from functional analysis are included div This is a large interdisciplinary and interrelated field and the present volume is suitable for a broad audience of mathematicians mathematical physicists and theoretical physicists including researchers and graduate students interested in Lie Theory

Inhabitable Infrastructures CJ Lim, 2017-05-25 Inhabitable Infrastructures Science fiction or urban future the follow up to Food City and Smartcities and Eco Warriors from one of the world's leading urban design and architectural thinkers explores the potential of climate change related multi use infrastructures that address the fundamental human requirements to protect to provide and to participate The stimulus for the infrastructures derives from postulated scenarios and processes gleaned from science fiction and futurology as well as the current body of scientific knowledge regarding changing environmental impacts on cities Science fiction is interdisciplinary by nature aggregates the past and present and evaluates both lay opinions and professional strategies in an attempt to develop foresight and to map possible futures The research culminates in the creation of innovative multi use infrastructures and integrated self sustaining support systems that meet the challenges posed through climate change and overpopulation and the reciprocal benefits of simultaneously addressing the threat and the shaping of cities J G Ballard has written that the psychological realm of science fiction is most valuable in its predictive function and in projecting emotions into the future The knowledge from the book is widely transferable constituting both solutions and speculative visions of future urban environments The book is indispensable reading for professionals and students in the fields of urban design architecture engineering and environmental socio politics

The New ABCs of Research Ben Shneiderman, 2016 This book is a guide for junior researchers and a manifesto for senior researchers and policy makers about how to update policies to respond to the immense challenges of our times The guiding principles are to combine applied and basic research in ways that use the methods of science engineering and design

The Overproduction of Truth Gianfranco Pacchioni, 2018-08-12 The way science is done has changed radically in recent years Scientific research and institutions which have long been characterized by passion dedication and reliability have increasingly less capacity for more ethical pursuits and are pressed by hard market laws From the vocation of a few science has become the profession of many possibly too many These trends come with consequences and risks such as the rise in fraud plagiarism and in particular the sheer volume of scientific publications often of little relevance The solution A

slow approach with more emphasis on quality rather than quantity that will help us to rediscover the essential role of the responsible scientist This work is a critical review and assessment of present day policies and behavior in scientific production and publication It touches on the tumultuous growth of scientific journals in parallel with the growth of self declared scientists over the world The author s own reflections and experiences help us to understand the mechanisms of contemporary science Along with personal reminiscences of times past the author investigates the loopholes and hoaxes of pretend journals and nonexistent congresses so common today in the scientific arena The book also discusses the problems of bibliometric indices which have resulted in large part from the above distortions of scientific life *Intelligent Electronic*
