Define the words in the boxes. On the line across each arrow, write a phrase that describes how the words in the boxes are related to one another.

Fill in the blank:

Virtually all forms of life depend on a molecule known as ATP as their primary energy carrier. Plants produce this during photosynthesis, but plants and all other organisms can also produce ATP through chemical pathways that degrade food molecules. The main degradative pathway requires free oxygen and is called aerobic.

There are three stages of aerobic respiration. In the first stage, glucose is partially degraded to pyruvate. By the end of the second stage, which includes the Citric Acid cycle, glucose has been completely degraded to carbon dioxide and water. Neither of the first two stages produce much ATP.

Now this powerful resource has been developed for three educational levels. This speaks to the enormity and intricacy of design in the universe. While the stars appear timeless, they instead reflect an all-powerful Creator who speaks of them in the Bible. Job 38:31-33. When Job looked at Orion, he saw about what we see today, even though he may have lived as much as 4,000 years ago. **Quarter 3**
