Physics of Strong Fields Walter Greiner, 2013-06-29. The NATO Advanced Study Institute on Physics of Strong Fields was held at Maratea, Italy from 1-14 June 1986. The school was devoted to the advances theoretical and experimental in physics of strong fields made during the past five years. The topic of the first week was almost exclusively quantum electrodynamics with discussions of symmetry breaking in the ground state of the physics of strong fields in heavy ion collisions and of precision tests of perturbative quantum electrodynamics. The famous positron lines found at GSI Darmstadt and the related question new particle versus vacuum decay yes or no or both constituted the center of experimental advances. This was followed in the second week by the presentation of a broad range of other areas where strong fields occur reaching from nuclear physics over quantum chromodynamics to gravitation theory and astrophysics. We were fortunate to be able to call on a body of lecturers who not only made considerable personal contributions to this research but who are also noted for their lecturing skills. Their enthusiasm and dedication for their work was readily transmitted to the students resulting in a very successful school. Index Medicus, 2004.
