*Cardiopulmonary Physiotherapy In Trauma: An Evidence-based Approach* Heleen Van Aswegen, Brenda May  
Morrow, 2015-06-24 Trauma is a serious public health problem worldwide and is the leading cause of death among adults and children. Physiotherapists play a key role in the interdisciplinary team caring for patients with physical injury after a traumatic event. *Cardiopulmonary Physiotherapy in Trauma* offers valuable insight into the advanced trauma life support and acute care management of patients with trauma related injuries as well as physiotherapy treatment aims, intervention strategies and precautions to treatment. A variety of topics related to trauma are brought together in this practical volume which shares information obtained from published research as well as the extensive clinical expertise of the authors. The dissemination of the authors' personal experience is key in cases where evidence to support the use of certain treatment techniques in patients with traumatic injury is still lacking. The book is thus an essential reference that encourages evidence based practice for advanced undergraduate students as well as graduate physiotherapists who work with trauma patients in the acute care setting.
