Climate Change A Barrie Pittock, 2009-03-31 It is widely accepted in the scientific community that climate change is a reality and that changes are happening with increasing rapidity In this second edition leading climate researcher Barrie Pittock revisits the effects that global warming is having on our planet in light of ever evolving scientific research Presenting all sides of the arguments about the science and possible remedies Pittock examines the latest analyses of climate change such as new and alarming observations regarding Arctic sea ice the recently published IPCC Fourth Assessment Report and the policies of the new Australian Government and how they affect the implementation of climate change initiatives New material focuses on massive investments in large scale renewables such as the kind being taken up in

California as well as many smaller scale activities in individual homes and businesses which are being driven by both regulatory and market mechanisms The book includes extensive endnotes with links to ongoing and updated information as well as some new illustrations While the message is clear that climate change is here and in some areas might already be having disastrous effects there is still hope for the future and the ideas presented here will inspire people to take action Climate Change The Science Impacts and Solutions is an important reference for students in environmental or social sciences policy makers and people who are genuinely concerned about the future of our environment

Ethics in an Age of Savage Inequalities James Winchester, 2015-12-08 Within the United States alone almost fifteen percent of the population lives in poverty Ethics in an Age of Savage Inequalities investigates what moral obligations the middle class might have to the poor While there are no simple ethical prescriptions the fact remains that many of us afford small luxuries while others in the world struggle to live on less than a dollar a day James J Winchester suggests that we can and should give not only charity but restitution to the poor Looking at extraction of minerals and the plight of service workers in the United States among many other things this book demonstrates how the middle class benefits from the exploitation of the poor and harms the environment in ways that threaten people in poverty Winchester argues that now is the time to take political action to reduce the savage inequalities in this world Of interest to anyone involved in ethics social justice sociology and even political science Ethics in an Age of Savage Inequalities explores the idea that money is only a small part of what we owe to the poor

A Just Transition to a Low Carbon Future in South Africa Ngobule Xaba, Saliem Fakir, 2022-02-01 Deliberations on the just transition in South Africa have intensified and will continue to do so for the next few years and decades Climate change widening socio economic inequality the precarious future of work and emergent approaches to financing arrangements have brought new urgency to the issues It therefore remains critical to interrogate how South Africa can ensure a just transition to a low carbon economy This book underlines the fact that the low carbon transition in South Africa has to grapple with complex historical social economic cultural and political factors The main message is that the transition to a low carbon society is possible but it can only succeed if it is just and handled collaboratively In addition the book aims to broaden the discourse on low carbon transition and explore the opportunities in and impediments to making the transition fair affordable and socio economically viable

Crop Production and Global Environmental Issues Khalid Rehman Hakeem, 2015-12-08 Meeting the world's food security challenge will require a multi national collaborative effort to integrate the best research from science engineering and socioeconomics so that technological advances can bring benefits where they are most needed The present book covers the effect of major environmental problems on crop production and how to cope with these issues for sustainable agriculture and improvements of crops The world's population is predicted to hit 9.6 Billion by 2050 up from today's total of nearly 7.3 Billion and with it food demand is predicted to increase substantially The post war second agricultural revolution in developed countries and the green revolution in developing nations in the mid 1960s converted

agricultural practices and elevated crop yields spectacularly but the outcome is levelling off and will not meet projected demand Simultaneously crop production is affected by many other factors including industrial pollution overuse of fertilizers and insecticides heavy metal and radiation stresses etc It has been noted that many pests are becoming resistant to insecticides Estimates vary but around 25% of crops can be lost to pests and diseases Climate change associated with agriculture is also a global issue Agriculture is a significant contributor to greenhouse gases and is estimated to account for 10 12% of total greenhouse gas GHG emissions Many of the issues highlighted are global problems and are addressed thoroughly in this work

The Routledge Companion to Humanitarian Action Roger Mac Ginty, Jenny H Peterson, 2015-03-24 The Companion on Humanitarian Action addresses the political ethical legal and practical issues which influence reactions to humanitarian crisis It does so by exploring the daily dilemmas faced by a range of actors including policy makers aid workers the private sector and the beneficiaries of aid and by challenging common perceptions regarding humanitarian crisis and the policies put in place to address these Through such explorations it provides practitioners and scholars with the knowledge needed to both

understand and improve upon current forms of humanitarian action The Companion will be of use to those interested a range of humanitarian programmes ranging from emergency medical assistance military interventions managing refugee flows and the implementation of international humanitarian law As opposed to addressing specific programmes it will explore five themes seen as relevant to understanding and engaging in all modes of humanitarian action The first section explores varying interpretations of humanitarianism including critical historical and political economic explanations as well as more practice based explorations focused on notions needs assessments and evaluation Following this readers will be exposed to the latest debates on a range of humanitarian principles including neutrality and sovereignty before exploring the key issues faced by the main actors involved in humanitarian crisis from international NGOs to local community based organizations The final two sections address what are seen as key dilemmas in regards to humanitarian action and emerging trends in the humanitarian system including the increasing role of social media in responding to crises Whilst not a how to guide the Companion contains many practical insights for policy makers and aid workers whilst also offering analytical insights for students of humanitarian action Indeed throughout the book readers will come to the realization that understanding and improving humanitarian action simultaneously requires both active critical reflection and an acceptance of the urgency and timeliness of action that is required for humanitarian assistance to have an impact on vital human needs Exploring a sector that is far from homogenous both practitioners and scholars alike will find the contributions of this book offers them a deeper understanding of the motivations and mechanics of current interventions but also insight into current changes and progress occurring in the field of humanitarian practice **Getting the Climate Science Facts Right** Medani P.

Bhandari,2022-09-01 Getting the Climate Science Facts Right discusses climate change science with reference to the Intergovernmental Panel on Climate Change IPCC Addressing climate change is the most important public priority of the 21st Century Unlike many issues however this issue is being driven by both science and its interface with politics The main institution for bridging this division between science and international politics is the IPCC As such it is the main source of the facts from which climate change policy is developed This book describes the ways in which the IPCC arrives at these facts and so can be sure they are complete and evidence based Seldom in history has science had such a direct relationship with politics The negotiation of an international policy regime requires at its outset an agreement on the facts In this case the facts are scientific complex and contentious Governments have recognized this and have by using the IPCC set up institutional machinery to provide facts from a source and in a manner that they can accept The way in which the IPCC functions is unique in that it melds the way in which science achieves consensus with the way governments do at the international level Starting with a process to examine review and debate scientific findings leading to a consensus about scientific fact usually expressed as probabilities that the findings will hold over time the IPCC then concludes by using the kind of consensus development mechanism that the United Nations typically uses to achieve agreements leading to the

formation of policy regimes The book examines the structure of the IPCC its composition and its procedures in order to achieve an understanding of its role and future *Africa - Up in Smoke?*, 2005 **Global Warming and the Political Ecology of Health** Hans Baer, Merrill Singer, 2016-09-17 In this groundbreaking global analysis of the relationship between climate change and human health Hans Baer and Merrill Singer inventory and critically analyze the diversity of significant and sometimes devastating health implications of global warming Using a range of theoretical tools from anthropology medicine and environmental sciences they present ecosyndemics as a new paradigm for understanding the relationship between environmental change and disease They also go beyond the traditional concept of disease to examine changes in subsistence and settlement patterns land use and lifeways throwing the sociopolitical and economic dimensions of climate change into stark relief Revealing the systemic structures of inequality underlying global warming they also issue a call to action arguing that fundamental changes in the world system are essential to the mitigation of an array of emerging health crises link to anthropogenic climate and environmental change **Environment, Climate, and Social Justice** Devendraraj Madhanagopal, Christopher Todd Beer, Bala Raju Nikku, André J. Pelser, 2022-07-09 This book approaches environmental climate and social justice comprehensively and interlinked The contributors predominantly from the Global South and have lived experiences challenge the eurocentrism that dominates knowledge production and discourses on environmental and climate in justices The collection of works balances theoretical empirical and practical aspects to address environmental and climate justice challenges through the lens of social justice This book gives voice to scholars of the Global South and uses an interdisciplinary approach to show the complexity of the problem and the opportunities for solutions making this book a powerful resource in teaching research and advocacy efforts The innovativeness of this approach stems from the use of narratives scientific explanation and thematic analysis to present the arguments in each chapter of this edited book Overall each chapter of this book acts as a powerful resource in teaching research and advocacy efforts This book fills a gap in the Global South production of environmental climate and social justice It provides in depth knowledge to the readers and raises their critical thinking about key elements discussions of justice issues of environmental conflicts and climate change The book is a useful read to a general audience interested in the topic of climate environment and development politics *South Africa's Country Report to the Fourteenth Session of the United Nations Commission on Sustainable Development (CSD 14)* South Africa. Department of Environmental Affairs and Tourism, 2005 *The Impact of Climate Change on Minorities and Indigenous Peoples* Rachel Baird, 2008-04-10 Climate change is attracting ever more attention from the media academics politicians and even businesses as evidence mounts about its scale and seriousness and the speed at which it is affecting the world But rarely does its impact on minorities and indigenous groups get a mention even though they are among the worst affected The effects of the changing climate are bad enough in themselves more frequent hurricanes and droughts burning temperatures new plagues of diseases and worse floods for instance But the general failure to recognize and respond to

minorities resulting problems greatly exacerbates their suffering Disadvantage and discrimination affect them at every stage including in the immediate aftermath of climate related disasters and during official planning at local national and international levels for coping with the current and future impacts of climate change The close relationship of some indigenous peoples and minorities with their natural environments makes them especially sensitive to the effects of global warming In some cases peoples ways of life and even their very existence are being threatened by climate change and by the rapidly increasing cultivation of biofuels which are being touted as part of the solution This briefing sets out some of the evidence on how minorities and indigenous people are being affected by climate change It shows how discrimination against them means that they are not getting the help they need or influence over governments plans for combating and adapting to climate change Finally it highlights some of the opportunities for change

Moving Health Sovereignty in Africa Andrew F. Cooper,Hany

Besada,2016-04-15 Today s era of intense globalization has unleashed dynamic movements of people pathogens and pests that overwhelm the static territorial jurisdictions on which the governance provided by sovereign states and their formal intergovernmental institutions is based This world of movement calls for new ideas and institutions to govern people s health above all in Africa where the movements and health challenges are the most acute This book insightfully explores these challenges in ways that put the perspectives of Africans themselves at centre stage It begins with the long central and still compelling African health challenge of combating the pandemic of HIV AIDS It then examines the global governance responses by the major multilateral organizations of the World Bank and the World Trade Organization and the newer informal flexible democratically oriented ones of the Group of Eight It also addresses the compounding health challenge created by climate change to assess both its intensifying impact on Africa and how all international institutions have largely failed to link climate and health in their governance response It concludes with several recommendations about the innovative ideas and institutions that offer a way to closing the great global governance gaps and thus improving Africans health and that of citizens beyond
