After Sales Service Manager Automotive:

Automotive After Sales Management - A Practical Guide to Successful Workshop Parts & Service Operations Mohamad Idrakisyah, 2021-02-23 The after sales segment of the automotive industry is gaining prominence over sales. The intensive competition in sales of new cars has reduced profit margins but on the other hand this is compensated from the higher profit margin derived from the after sales business. The onus is on the automotive manufacturers to heed to the new importance of the after sales business in reacting to the changes and expectations of customers. This book is written as a practical guide manual on matters relating to the management of the after sales business. The objective is to bring about improvements in all levels of the after sales operations in workshops. The growth, profitability and sustainability of the after sales dealerships are possible when the business is managed in an effective and efficient manner. The chapters in the book cover all matters pertaining to the after sales operations written in an easy to understand manner for practical and straightforward implementation across dealerships.

Achieving Brand Loyalty in China through After-Sales Services Alexander Fraß, 2016-06-08 This paper provides a guideline for how the entire process chain of automotive after sales services could be researched in China. In addition, Schwartz's individual level value theory is introduced as a beneficial operationalisation approach to cultural marketing. So values are modelled as exogenous variables in order to show which ones are really causal. A total of 301 Chinese workshop customers were surveyed to assess the critical success factors of after sales services via partial least squares structural equation modelling. After sales services have become very important in the automobile industry. However, this area has not been sufficiently researched, particularly with regard to China, the most important car market globally.

Energy and Transport in Green Transition Atle Midttun, Nina Witoszek, 2015-06-26 This book breaks new ground in the studies of green transition. It frames the ongoing transformation in terms of a battle of modernities with the emerging vision of ecomodernity as the final destination. It also offers a systematic exploration of the potential for extensive transformation of carbon intensive sectors with a focus on energy and transport towards a low or post carbon economy. The book does so in a comparative perspective by pointing to a diversity of techno-economic and institutional solutions in the mature Western economies and in the rapidly growing East and developing South. The contributors highlight a broad spectrum of available alternatives as well as illuminate conflicting interests involved. They also demonstrate how solutions to the climate challenge require parallel technological and governance innovation. The book advocates a new overarching vision and agenda of ecomodernity based on a synergistic paradigm shift in industry, politics and culture to trigger and sustain the ecological innovation necessary to tip development in a green direction. This vision cannot be monolithic; rather, it should reflect the diverse interests and conditions of the global population. This book is aimed at researchers and postgraduate students of energy, transport, environmental and
