Maple 9 M. B. Monagan, 2003 **Maple Animation** John F. Putz, 2018-07-31 There is nothing quite like that feeling you get when you see that look of recognition and enjoyment on your students faces Not just

the strong ones but everyone is nodding in agreement during your first explanation of the geometry of directional derivatives. If you have incorporated animated demonstrations into your teaching you know how effective they can be in eliciting this kind of response. You know the value of giving students vivid moving images to tie to concepts. But learning to make animations generally requires extensive searching through a vast computer algebra system for the pertinent functions. Maple Animation brings together virtually all of the functions and procedures useful in creating sophisticated animations using Maple 7, 8 or 9 and it presents them in a logical accessible way. The accompanying downloadable resources provide all of the Maple code used in the book including the code for more than 30 ready to use demonstrations. From Newton's method to linear transformations the complete animations included in this book allow you to use them straight out of the box. Careful explanations of the methods teach you how to implement your own creative ideas. Whether you are a novice or an experienced Maple user Maple Animation provides the tools and skills to enhance your teaching and your students enjoyment of the subject through animation.

Computing with Maple Francis Wright, 2001-09-27 Powerful flexible easy to use small wonder that the use of MAPLE continues to increase particularly since the latest releases of MAPLE. The built in nature of its numerical and graphical facilities gives MAPLE a distinct advantage over traditional programming languages yet to date no textbook has used that advantage to introduce programming concepts. Moreover few books based on MAPLE's latest versions even exist. Computing with MAPLE presents general programming principles using MAPLE as a concrete example of a programming language. The author first addresses the basic MAPLE functions accessible for interactive use then moves to actual programming discussing all of the programming facilities that MAPLE provides including control structures data types graphics spreadsheets text processing and object oriented programming. Reflecting MAPLE's primary function as a computational tool the book's emphasis is on mathematical examples and it includes a full chapter devoted to algebraic programming. Classroom tested since 1995 the material in Computing with MAPLE is particularly appropriate for an intermediate level introductory course in programming for both mathematics and computing students. It includes numerous exercises and test questions with MAPLE worksheets contact information and supplementary material available on the Internet.

Geometric Computation Falai Chen, Dongming Wang, 2004 This book contains tutorial surveys and original research contributions in geometric computing modeling and reasoning. Highlighting the role of algebraic computation it covers surface blending implicitization and parametrization automated deduction with Clifford algebra and in real geometry and exact geometric computation. Basic techniques advanced methods and new findings are presented coherently with many examples and illustrations. Using this book the reader will easily cross the frontiers of symbolic computation computer aided geometric design and automated reasoning. The book is also a valuable reference for people working in other relevant areas such as scientific computing computer graphics and artificial intelligence.

Computer Algebra Recipes Richard H. Enns, George C. McGuire, 2007-02-26 Computer algebra systems are revolutionizing the teaching the learning and the

exploration of science Not only can students and researchers work through mathematical models more efficiently and with fewer errors than with pencil and paper they can also easily explore both analytically and numerically more complex and computationally intensive models Aimed at science and engineering undergraduates at the sophomore junior level this introductory guide to the mathematical models of science is filled with examples from a wide variety of disciplines including biology economics medicine engineering game theory mathematics physics and chemistry The topics are organized into the Appetizers dealing with graphical aspects the Entrees concentrating on symbolic computation and the Desserts illustrating numerical simulation The heart of the text is a large number of computer algebra recipes based on the Maple 10 software system These have been designed not only to provide tools for problem solving but also to stimulate the reader's imagination Associated with each recipe is a scientific model or method and an interesting or amusing story accompanied with a thought provoking quote that leads the reader through the various steps of the recipe Each section of recipes is followed by a set of problems that readers can use to check their understanding or to develop the topic further This text is the first of two volumes the advanced guide aimed at junior senior graduate level students dealing with more advanced differential equation models
