South African Statistics ,2003 **Hominin Postcranial Remains from Sterkfontein, South Africa, 1936-1995**

Bernhard Zipfel, Brian G. Richmond, Carol V. Ward, 2020-05-07 The 1924 African discovery of an early hominin child's skull referred to as *Australopithecus africanus* by Raymond Dart was a major event in the history of paleoanthropology. This provided the first evidence of early hominins in Africa and overturned conventional ideas about human evolution. Subsequent discoveries of *A. africanus* fossils notably from cave deposits at Sterkfontein yielded the first evidence that early hominins were habitual bipeds. Fifty years after this the discovered wealth of fossil evidence in eastern Africa of the slightly older and craniodentally more primitive taxon *A. afarensis* catalyzed debates about the origin and evolution of human gait and the phylogenetic relationships among early hominins. This formed the main basis of our understanding of early hominin bipedality and paleobiology. Little attention has been paid to the variation among species in postcranial anatomy and locomotion although intriguing hints are beginning to appear in the literature. Did multiple varieties of bipedality evolve? Did australopithecine species differ in positional or manipulative abilities, body proportions or patterns of sexual dimorphism? These are critical questions for understanding the evolution of australopithecines and hominin locomotion. In this book Bernhard Zipfel, Brian Richmond, Carol Ward and the most knowledgeable scholars in their respective fields provide groundbreaking accounts for each postcranial fossil and expert examinations into the background of each fossil. The chapters include standardized high quality photographs and anatomical descriptions to allow readers to read the book entirely or learn by comparing features across chapters. *Hominin Postcranial Remains from Sterkfontein South Africa 1936-1995* is an evolutionary history of South African hominins and it offers readers an orientation and introduction to the field. This is an important reference book for professional paleontologists, paleobiologists, anthropologists, geologists, students and historians interested in human evolution.

Rough and Tumble Travis Pickering, 2013-04-10 Travis Rayne Pickering argues that the advent of ambush hunting approximately two million years ago marked a milestone in human evolution, one that established the social dynamic that allowed our ancestors to expand their range and diet. He challenges the traditional link between aggression and human predation, however, claiming that while aggressive attack is a perfectly efficient way for our chimpanzee cousins to kill prey, it was a hopeless tactic for early human hunters who, in comparison to their large, potentially dangerous prey, were small, weak, and slow-footed. Technology that evolved from wooden spears to stone-tipped spears and ultimately to the bow and arrow increased the distance between predator and prey and facilitated an emotional detachment that allowed hunters to stalk and kill large game. Based on studies of humans and of other primates as well as on fossil and archaeological evidence, *Rough and Tumble* offers a new perspective on human evolution by decoupling ideas of aggression and predation to build a more realistic understanding of what it is to be human. *Handbook on Alternative Global Development* Franklin Obeng-Odoom, 2023-11-03 Challenging the dominant and mainstream views in global development, this pioneering Handbook

questions the entirety of the development process in order to outline holistic political economies of development discontents and alternatives
