Introduction

Thank you for choosing a Balmar high-output alternator. This alternator is uniquely engineered to provide the finest performance and durability for your vessel. Unlike most alternators, Balmar alternators feature standard on the industry of precision cast and machined an aluminum housing. Our marine alternators provide exceptional output at lower engine RPM's typical of marine diesel engines, so you can enjoy shorter charge cycles, greater economy, longer battery life and less noise and fumes.

When used in conjunction with Balmar microprocessor-controlled Star Charge and AHS-Series multi-stage regulators, your Balmar alternator provides even greater efficiency when charging deep-cycle flooded, absorbent flooded, gel, AGM, Geltec and other marine battery technologies. When paired for your battery type, the smart regulator guides your alternator through a learned charge cycle that ensures the best rate possible for your batteries. Balmar multi-stage regulators provide the ability to monitor temperature of your alternator. When used with the optional alternator temperature sensor (ATO TS-A) installed, the regulator will automatically reduce field output to 50% and activate a warning circuit which can control a horn-installed visual or audible alert, should an over-temperature condition occur. Together, the Balmar high-output alternator and multi-stage regulator work to ensure the best charge possible.

Safety Considerations

Before installing your new alternator, please take a moment to consider the following guidelines for safe alternator installation and operation. Failure to follow these guidelines could result in injury or damage to your vessel's electrical system.

1. Always disconnect your batteries and turn your battery switch to the "OFF" position prior to installing your alternator.
2. Remove any loose wiring, routing or jewelry which could become entangled in your motor or other machinery.
3. Wear ANSI-approved safety glasses or goggles.
4. Ensure that the engine has cooled sufficiently before beginning installation.
5. Do NOT install your high-output alternator without ensuring that the system setting is fully charged to prevent increased amperage loads.
6. Be sure that your work area is sufficiently ventilated and that no fluids or chemicals are present to any extent prior to work here.
7. Do NOT connect your charging system without proper testing. Failure to do so could result in severe injury and/or damage to loss of your vessel. OBTI takes no responsibility for this.
8. Do NOT attempt regulator wiring using alcohol or medications, which could impair your judgment or reaction time.
9. Use the right tool for the job. Use of improper tools could result in damage or injury.
10. Take time to read the manual. Equipment damage and possible injury may result from an incomplete understanding of the proper installation and use of the alternator.

CAUTION: The following instructions are intended for use by experienced marine electrical installers. If you are not sufficiently experienced with marine electrical systems, we recommend a qualified electrician to work for installation.
