Target Search Problems Denis Grebenkov, Ralf Metzler, Gleb Oshanin, 2024-12-26. This book presents cutting edge research addressing the mathematical models used to tackle the Target problem as it manifests itself in a wide range of disciplines. Leading international experts from around the world describe a variety of different approaches to this truly multidisciplinary topic. Recent years have witnessed a substantial and still growing interest in understanding the general Target problem. This encompasses a wide range of different situations in which some agents perform a deterministic or stochastic motion to search for a certain immobile or mobile target. Such problems arise in many disciplines to name but a few: computer science, the evolution of stock markets, biochemistry, bio medicine, evolutionary games as well as diverse areas of physics. This book with its up to date collection of chapters authored by leading experts in these and other fields provides a comprehensive and complete picture in broadly accessible language. The book will naturally serve as a source of inspiration for further research as well as facilitating a cross fertilization of approaches, ideas and research directions.
