

## 3.4 Cycles of Matter

### Lesson Objectives

-  Describe how matter cycles among the living and nonliving parts of an ecosystem.
-  Describe how water cycles through the biosphere.
-  Explain why nutrients are important in living systems.
-  Describe how the availability of nutrients affects the productivity of ecosystems.

### Lesson Summary

**Recycling in the Biosphere** \_\_\_\_\_, unlike energy, is \_\_\_\_\_ within and between ecosystems. Elements pass from one organism to another and from one part of the biosphere to another through \_\_\_\_\_, which are closed loops powered by the flow of energy.

**The Water Cycle** Water moves between the \_\_\_\_\_, the \_\_\_\_\_, and \_\_\_\_\_.

- ▶ Evaporation is the process in which water changes from a liquid to a gas.
- ▶ Transpiration is the process in which water evaporates from the leaves of plants. Other steps in the water cycle include \_\_\_\_\_.

**Nutrient Cycles** The chemical substances that an organism needs to survive are called \_\_\_\_\_. Like water, nutrients pass through organisms and the environment.

- ▶ **Carbon Cycle:** Carbon is a key ingredient of all \_\_\_\_\_. Processes involved in the carbon cycle include photosynthesis and human activities such as burning.
- ▶ **Nitrogen Cycle:** Nitrogen is needed by all organisms to \_\_\_\_\_. Processes involved in the nitrogen cycle include \_\_\_\_\_ and \_\_\_\_\_.
  - In **nitrogen fixation**, certain \_\_\_\_\_ convert \_\_\_\_\_ into \_\_\_\_\_.
  - In **denitrification**, other soil \_\_\_\_\_ nitrogen compounds called \_\_\_\_\_ back into \_\_\_\_\_.
- ▶ **Phosphorus Cycle:** Phosphorus is needed for molecules such as \_\_\_\_\_ and \_\_\_\_\_. Most of the phosphorus in the biosphere is \_\_\_\_\_ and \_\_\_\_\_. Stored phosphorus is gradually released into water and soil, where it is used by organisms.

**Nutrient Limitation** A nutrient that, in short supply, can limit the productivity of an ecosystem is called a \_\_\_\_\_.

Acheampong, Karen Lucas, Michael Poku-Boansi, Chinebuli Uzundu, 2022-11-02

This book provides a collection of insightful conceptual and empirical works that situate transport and mobility challenges in the unique context of individual countries and cities while highlighting commonalities across the African continent. Written from an interdisciplinary perspective, the book covers important themes in transport and mobility, including the links between urbanization, urban structure, and accessibility; transport equity and poverty; non-motorized transport; public transport; and the challenges and opportunities of new and emerging transport technologies and ICT-mediated mobility solutions. Each chapter engages with the normative imperatives that are critical to improving the transport and mobility situations of African urban areas now and in the future.

*Soil Organic Matter in Temperate Agroecosystems: Long Term Experiments in North America*  
Eldor A. Paul, Keith H. Paustian, E. T. Elliott, C. Vernon Cole, 2019-08-16  
The presence or absence of soil organic matter (SOM) has important implications for agricultural productivity. It could also have significant implications for global climate due to its role as a source/sink of carbon. Therefore, it is important to understand the issues related to the accumulation or loss of SOM to use what we have learned from experiments to make sound decisions about soil and crop management and to test models and future concepts concerning SOM management. A database is included with the book presenting tabular data for 34 sites in North America. *Soil Organic Matter in Temperate Agroecosystems* discusses all of these issues and more, answering such questions as:

*Material Fluxes on the Surface of the Earth*  
National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Board on Earth Sciences and Resources, 1994-02-01  
Understanding the ebb and flow of materials on the earth's surface is vital to comprehending environmental change. We need to differentiate between those that represent a progression of natural events from those that might be human-induced. The latter can be managed by changing policies; the former probably cannot. This volume presents what researchers know and do not know about the base or natural level of surficial fluxes and their dynamics. Leading experts in the field offer a historical perspective on geofluxes and discuss the cycles of materials on the earth's surface from weathering processes to the movement of material through the river system and oceans to their deposition. The committee sets research directions in five areas: shallow water studies; mapping rates of change; sample dating; and most critical, understanding whether human influence can exceed the natural variability in geoflux processes. This volume will be important reading for geophysical scientists, researchers, faculty, and students as well as environmental policymakers.

*From Fires to Oceans: Dynamics of Fire-Derived Organic Matter in Terrestrial and Aquatic Ecosystems*  
Samuel Abiven, Cristina Santín, 2019-05-09  
Fire-derived organic matter, also known as pyrogenic carbon (PyC), is ubiquitous on Earth. It can be found in soils, sediments, water, and air. In this wide range of environments, fire-derived organic matter represents a key component of the organic matter pool, and in many cases, the largest identifiable group of organic compounds. PyC is also one of the most persistent organic matter fractions in the ecosystems, and its study is therefore particularly relevant for the global carbon cycle. From its production during vegetation fires to its transfer into soils, sediments, and waters, PyC goes through different transformations, both abiotic

and biotic Contrary to early assumptions PyC is not inert and interacts strongly with the environment evidence of microbial decomposition oxidation patterns and interactions with minerals have been described in different matrices PyC travels across these different environments and it is modified chemically and physically but remains persistent This Research Topic explores important questions in our understanding of fire derived organic matter from the characterization and quantification of PyC components to the transformation and mobilization processes taking place on terrestrial and aquatic ecosystems The studies compiled here provide novel and often unexpected results They all answer some of the questions posed and more importantly provide scope for many more
