For Brake Lever information please read the integrated brake shifter User Manual.

Caution:

- Brakes are a safety-critical item on a bicycle. Improper set-up or use of brakes can result in loss of control or an accident, which could lead to a severe injury. It is your responsibility to learn proper braking techniques. Consult the user manual for your bicycle and a professional bike dealer. Practice your riding and braking techniques on a flat and level surface prior to aggressive riding.
- The effectiveness of braking is dependent on many conditions over which SRAM has no control including the speed of the bicycle, type and condition of the riding surface, braking lever force, proper installation and maintenance of brakes, cables, levers, brake pads, the condition of the bike, weight of the rider, braking technique, weather, and a variety of other factors. Remember, it takes longer to stop in wet conditions.
- SRAM brakes and levers are not intended for use on any motorized bicycle or vehicle. Any such use could result in a serious personal injury.
- Inspect your brakes regularly for damage, and always inspect them thoroughly after any crash or severe impact. If you detect damage, please have your brakes inspected by a professional bike dealer.
- Follow these instructions carefully. If you do not understand the instructions, have the installation done by a professional bike mechanic.

Advice:

- SRAM's road brake pads are optimized for aluminum rims. If used with ceramic-coated or carbon rims, the brake pads will wear more rapidly. Be certain to inspect them often.
- If the brake pads are worn until the grooves disappear, replace them with new pads.

Hallyn,2013-03-14 Science constructs its objects is this a metaphor It does not necessarily mean anyway that the real does not pre exist Only that in the final instance it is the Other of which we know neither the limits nor the figure and to which we only have access through the constructions we make of it Or in semiotic terms borrowed from Charles S Peirce the world is the dynamic object that intervenes in science only through the immediate objects that manifest themselves in signs And even then the choice of the term immediate is not entirely felicitous it would be

better to talk of mediated objects since their conception is mediated by the conditions from which perception as well as the language that expresses it derive The preference bestowed on certain constructions over others results from the slighter recalcitrance in imagining a dynamic object through one or another mediated object This recalcitrance that prompts one to surrender constructions does not come directly from the real from the dynamic object but from other constructions Again this does not mean that reality does not exist but that it only speaks confirms and objects to the extent that it is being questioned within a certain form by certain instruments in a certain language Even if it appears recalcitrant the dynamic object intervenes only through another construction Man not nature decides on the form to be considered the instruments and language to be adopted
