

2 GEAR SHIFT LINKAGE ADJUSTMENT

Check the operation of the gear shift linkage for smooth cross-over operation.

To adjust the gear shift linkage, move the selector lever to the neutral position, making certain that the selector lever on other than a P-series truck is horizontal to the instrument panel line. The selector lever on a P-series truck should be slightly above horizontal. If selector lever position must be changed, disconnect both connecting rod adjustment sleeves at the transmission shift levers (Fig. 1). Adjust the position of the selector lever by turning the intermediate and high adjustment sleeve on its connecting rod until the selector lever is horizontal.

With the selector lever properly positioned in neutral, adjust the position of the low and reverse adjustment sleeve for smooth cross-over operation. The gear shift tube shift levers should be approximately parallel with each other. Move the selector lever through all shift positions as a final check for smooth operation. Adjust the position of the steering column tube if there is interference.

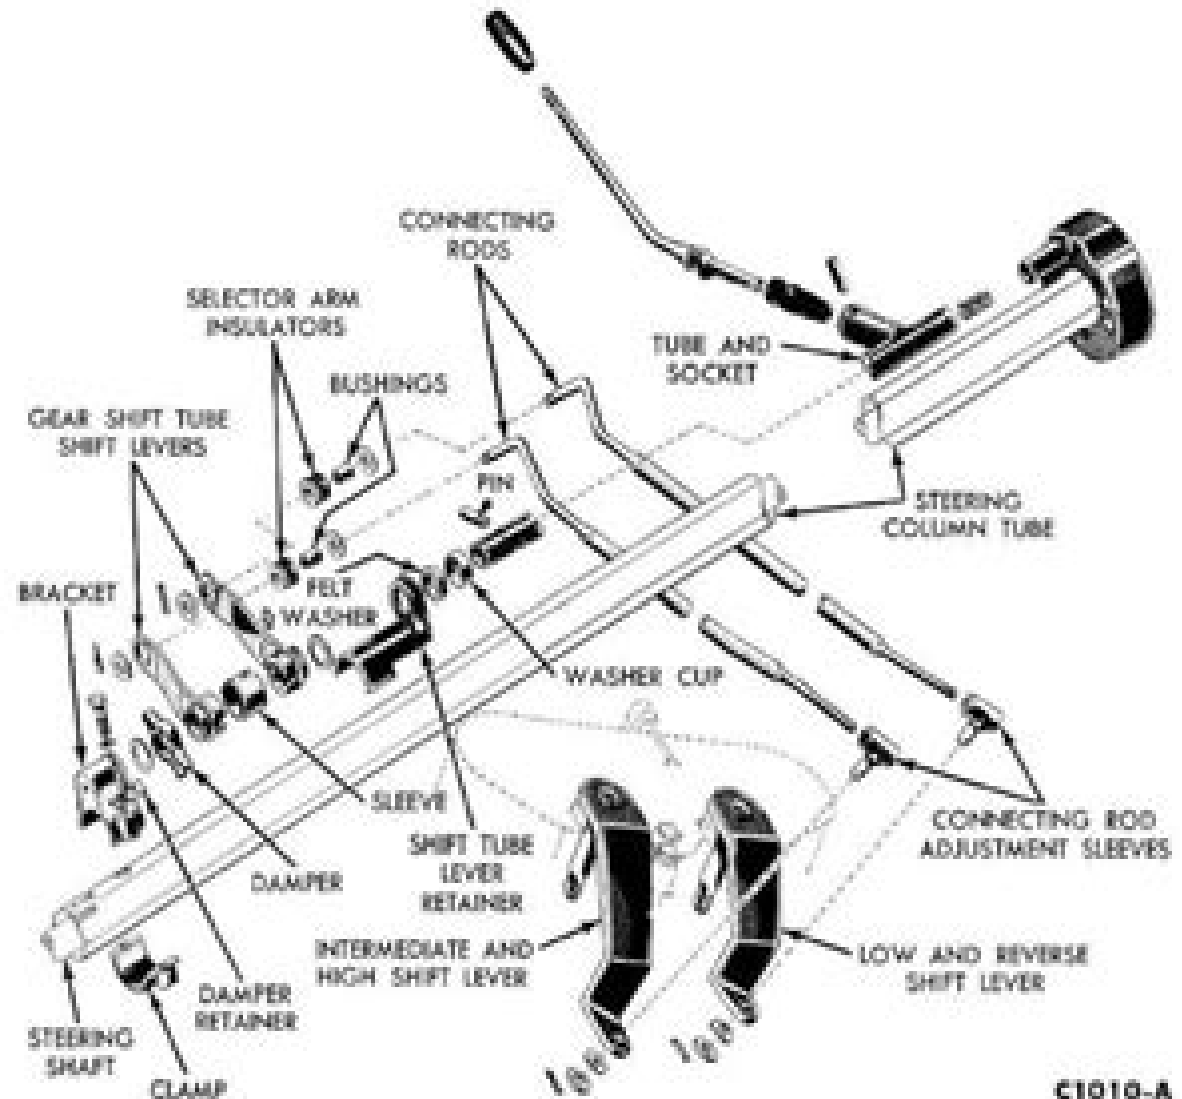

FIG. 1—Typical Gear Shift Linkage
