DESCRIPTION AND OPERATING INSTRUCTIONS

GENERAL DESCRIPTION

Pontiac's Tempest Heating and Defroster System provides rapid warm-up sensation and even distribution of warmed air to all parts of the car. All air entering the system is taken through hood high cowl vents providing air with a minimum of dust, foreign material and undesirable fumes.

Fig. 2-1 Air Outlets and Controls

The use of outside air exclusively provides constant and rapidly changing air inside the car, eliminating a smoke-filled interior and keeps the occupants comfortable.

The driver has fingertip control of the temperature warmed air entering the car. When heated air is desired, the blower forces air taken from the hood high cowl inlet duct through the heater core and then through an air distributing system to the air outlets.

The design of the heater and defroster system, its valves and controls permits a method of obtaining different amounts of forced air flow for ventilation.

AIR OUTLETS AND CONTROLS

AIR OUTLETS

Heated air enters the interior of the car and is distributed by a center outlet grille opening at the bottom of the heater duct, which disperses air over the front floor area and is so aimed that it also directs air to the rear passenger compartment.

Additional outlets are provided on the right and left sides of the heater outlet air duct for additional air distribution to the driver and front seat passenger floor area.
