

NOTE: The hazard warning flasher will operate with the ignition in the lock position and the key removed, allowing the car to be locked while help is sought.

CAUTION: If the brake pedal is depressed when the hazard warning flasher is in operation, the lights will not flash but will glow continuously instead.

Heating and Defrosting

(Without Air Conditioning)

Two levers, for air (upper) and temperature (lower), located in the heater control panel to the right of the steering column, provide maximum regulation and distribution of heated air in the passenger compartment.

For Heating – The air control lever must be moved to the "HEAT" position. The control regulates the degree of heat as it is moved to the right.

CAUTION: In inclement weather, clear snow or ice from cowl air inlets. This will improve heater and defroster efficiency and reduce formation of fog or frost on the inside of the windshield during initial operation under certain atmospheric conditions. Also, clear the windshield, rear window, outside mirrors and all side windows of ice or snow prior to operation of the vehicle. This will improve driver's vision during initial operation.

For Defrosting – Move the air control lever to the "DEFROST" position. When the air control lever is at the extreme right position, about 90% of the air will flow through the defroster outlets and 10% to the passenger compartment through the heating outlets.

To Control the Blower – Forced air for heating or defrosting may be obtained by moving the fan switch lever upward which is located to the right of the sliding lever controls. The first upward position from "OFF" is low. The second is medium and the top position is "HI." For maximum heat in the rear seat area, put the fan on "HI," move the air control to "HEAT" and the temperature control to the extreme

right, close the windows and make certain the space under the front seat is clear of any obstructions.

To Turn the System Off – Move the air lever to the extreme left, which is the "OFF" position, and move the blower switch to "OFF."

Turn Signals and Lane Change Feature

The turn signal lever is located on the left side of the steering column immediately under the steering wheel. The lever is moved upward to signal a right turn and downward to signal a left turn. Lamps on the front and rear of the car transmit this signal to other motorists and pedestrians. The ignition switch must be in the "ON"
