improvement is needed Teacher knows if a particular lesson needs to be retaught and determines if additional practice support is necessary If utilized correctly this curriculum will help students build a solid foundation for subtraction **Go math! Planning and teaching resources** , *Math Mammoth Subtraction 1* Maria Miller,2024-04-06 Math Mammoth Subtraction 1 is a worktext that covers the concept of subtraction the relationship between addition and subtraction and the various meanings of subtraction In the first lesson Subtraction Is Taking Away the child learns the basic meaning of subtraction as taking away objects and learns to write subtractions from an illustration where some objects are crossed out In the next lesson the child counts down to subtract which ties in subtraction with the number line This is a transitional strategy to solve subtraction problems because later students will learn more efficient ways to subtract but it is important conceptually The following lesson Subtraction and Addition in the Same Picture begins the study of the relationship between addition and subtraction This concept will span several lessons This first lesson presents two sets of objects such as blue and white balls and the student writes both an addition sentence and a subtraction sentence from this illustration The lesson When Can You Subtract concentrates on the idea that some subtractions such as $4 - 5$ are meaningless when you think of taking away The child also makes subtraction patterns in this lesson Then we continue studying the connection between addition and subtraction in the lesson Two Subtractions from One Addition As an example the child writes both $8 - 3 = 5$ and $8 - 5 = 3$ from the addition $3 + 5 = 8$ This idea ties in with fact families a concept that is coming up soon In the lesson Two Parts One Total we study word problems that do not involve the idea of taking away but have two parts making up a total For example if there are 10 flowers of which some are white and some are red and seven of them are white how many are red Then we study fact families which means writing two additions and two subtractions using the same three numbers In the lesson How Many More students find how many more or how many fewer objects one person has than the other by drawing the objects This lesson can easily be done with manipulatives if desired In the very next lesson How Many More Problems and Differences we continue the theme this time writing a missing addend addition for problems that ask how many more For example Veronica has 4 marbles and Ann has 6 We write the missing addend sentence $4 + \underline{\quad} = 6$ to find how many more Ann has In the next lesson the child then learns to write subtraction sentences for such problems *Teaching and Learning Subtraction* AnnieMaeHawkins,2016-07-18 This is not busy work or mindless drill and kill This is not throwing out a bunch of numbers and leaving you to figure it out This workbook contains REAL WORK which produces REAL LEARNING We give you the tools necessary to bridge the gap between the abstract concept of regrouping and the concrete result of subtracting two numbers For a few pennies a page you get reproducible student worksheets a Teacher s Guide with Direct Instructions Answer Keys that demonstrate Step by Step Directions Pre resource classrooms special education classes ESOL ESL classes home school and adult education In subtraction you start with a larger number and take some away To do this manually you either count backwards or start with the smaller number and count up In many instances this requires several steps The

bigger the number the more steps required Some students struggle to either fully comprehend or remember the necessary steps for manual subtraction Just as there are different learning styles there are many different teaching strategies It is essential to find what works best for your students to maximize their learning potential This curriculum facilitates higher level thinking active participation and mastery of skills via A Teacher s Guide with Step by Step Direct Instructions the guide provides reading prompts to help the process of teaching subtraction less frustrating for both the teacher and students The step by step directions encourage active participation which provides opportunity for learning Answer Keys There are two types of answer keys The first serves as examples of how the problem should look and the others are in the back of the workbook throughout the teacher s guide Blank Templates convenient for teachers to create their own math problems have students partner to create math problems for themselves or the entire class Templates can also be used to create assignments for additional practice Sequential Lessons provide students plenty of practice applying the strategies being taught and those learned in prior lessons as they build confidence and competence Scaffolding each lesson starts with lots of guidance and support which is gradually decreased Students are expected to work math problems independently by the end of each lesson Word Problems build critical thinking skills and help students gain a deeper understanding of how subtraction relates to the real world They also show students how to translate words into a math equation Independent Practice provide students abundant opportunity to practice what they ve learned and teachers a chance to check students progress before continuing on to the next lesson or activity Pre Tests demonstrates students strengths and weaknesses within a particular subtraction skillset Pre Tests also provide the teacher with an accurate measure of students level of comprehension lessons can then be planned accordingly Post Tests displays students comprehension of prior and most current lessons and allows students and teacher to accurately monitor student progress Students celebrate their success and know exactly if and where improvement is needed Teacher knows if a particular lesson needs to be retaught and determines if additional practice support is necessary If utilized correctly this curriculum will help students build a foundation for understanding subtraction
