The Consequences of Global Disasters Anthony Elliott, Eric Hsu, 2016-04-14 Disasters of the 21st century differ substantially from other kinds of hazards that previous societies have had to cope with because of the twin forces of globalization and the communications revolution But what makes today s disasters industrial technological environmental and socio cultural so different in scope and impact What are the possible disasters of the future And how can we as collective humanity best manage and respond to the globalization of disasters The Consequences of Global Disasters makes a distinctive contribution to the ever expanding field of disaster research by developing a multi contextual multi disciplinary and multi methodological approach to the social analysis of disasters Anthony Elliott and Eric L Hsu have brought together a highly distinguished group of international contributors to focus on how people react to the unsettling effects of disasters which come in a multitude of forms Numerous contributors concentrate on the cultural political and psychological ramifications of the 2011 Great East Japan earthquake and tsunami but disasters in other contexts such as Australia China and Haiti are considered as well By offering unique empirical methodological and theoretical insights The Consequences of Global Disasters sets an agenda for future developments in the field of disaster research and will be a key resource for students and scholars working in social science disciplines such as sociology cultural studies international relations psycho social studies social work Japanese studies and social theory

Networking of Theories as a Research Practice in Mathematics Education Angelika Bikner-Ahsbals, Susanne Prediger, 2014-08-25 How can we deal with the diversity of theories in mathematics education This was the main question that led the authors of this book to found the Networking Theories Group Starting from the shared assumption that the existence of different theories is a resource for mathematics education research the authors have explored the possibilities of interactions between theories such as contrasting coordinating and locally integrating them The book explains and illustrates what it means to network theories it presents networking as a challenging but fruitful research practice and shows how the Group dealt with this challenge considering

five theoretical approaches namely the approach of Action Production and Communication APC the Theory of Didactical Situations TDS the Anthropological Theory of the Didactic ATD the approach of Abstraction in Context AiC and the Theory of Interest Dense Situations IDS A synthetic presentation of each theory and their connections shows how the activity of networking generates questions at the theoretical methodological and practical levels and how the work on these questions leads to both theoretical and practical progress The core of the book consists of four new networking case studies which illustrate what exactly can be gained by this approach and what kind of difficulties might arise **Oswaal 164**
