Ebook Biology The Coevolution of IDO1 and AhR in the Emergence of Regulatory T Cells in Mammals Ursula Grohmann, Paolo Puccetti, 2016-01-28

Indoleamine 2 3 dioxygenase IDO1 is an ancestral enzyme that initially confined to the regulation of tryptophan availability in local tissue microenvironments is now considered to play a wider role that extends to homeostasis and plasticity of the immune system Thus IDO biology has implications for many aspects of immunopathology including viral infections neoplasia autoimmunity and chronic inflammation Its immunoregulatory effects are mainly mediated by dendritic cells DCs and involve not only tryptophan deprivation but also production of kynurenines that act on IDO DCs thus rendering an otherwise stimulatory DC capable of regulatory effects as well as on T cells The aryl hydrocarbon receptor AhR is a ligand operated transcription factor originally recognized as the effector mediating the pathologic effects of dioxins and other pollutants However it is now well established that AhR activation by endogenous ligands can produce immunoregulatory effects The IDO1 mechanism appears to have been selected through phylogenesis primarily to prevent overreacting responses to TLR recognized pathogen associated molecular patterns and only later did it become involved in the response to T cell receptor recognized antigens As a result in mammals IDO1 has become pivotal in fetomaternal tolerance at a time when regulatory T cells emerged to meet the same need namely protecting the fetus IDO1 and regulatory T Treg cells may have then coevolved to broaden their function well beyond their initial task of protecting the fetus such that in acquired immunity IDO1 with its dual enzymic and signaling function has turned into an important component of the peripheral generation and effector function of regulatory T cells AhR in turn which has a role in regulatory T cell generation is presumed to have evolved from invertebrates where it served a ligand independent role in normal development processes Evolution of the receptor in vertebrates resulted in the ability to bind structurally different ligands including xenobiotics and microbiota derived catabolites Considering the inability of invertebrate AhR homologs to bind dioxins the adaptive role of the AhR to act as a regulator of xenobiotic metabolizing enzymes may have been a vertebrate innovation to later acquire an additional immune regulatory role by coevolutionary pressure in mammals by IDO1 and regulatory T cells Thus an entirely new paradigm in immunology and more specifically in immune tolerance is the coevolution of three systems namely the IDO1 mechanism AhR driven gene transcription and T cell regulatory activity that originating from the initial need of protecting

the fetus in mammals have later turned into a pivotal mechanism of peripheral tolerance in autoimmunity transplantation and neoplasia

Insect Ecomorphology Oliver Betz,2025-02-25 Insect Ecomorphology Linking Functional Insect Morphology to Ecology and Evolution offers the most up to date knowledge and understanding of the morphology of insects and the functional basis of their diversity This book covers the form and function of insect body structures synthesized with their physiological performance capabilities biological roles and evolutionary histories Written by international experts this book provides a modern outline of the topic exploring the ecomorphology of functional systems such as insect feeding locomotion sensing and reproduction The combination of conceptual and review chapters methodological approaches and case studies enables readers to delve into active research fields and attain a general idea of the explanatory power of the form function performance paradigm The book uncovers key structures of the different regions of the insect body elucidates how they function and investigates their ecological and evolutionary implications Insect Ecomorphology Linking Functional Insect Morphology to Ecology and Evolution is a vital resource for entomologists biologists and zoologists especially those seeking to better understand the morphology and physiological impacts tying insects to environments and evolution Integrates traditionally separate fields of research with the aim of understanding insect morphology ecology and evolution Considers the impacts of insect ecomorphology on biomimetic applications Includes conceptual and methodological chapters to help readers appreciate the ways in which ecomorphological studies are performed

Principles of Human Body Organization and Function Mr. Rohit Manglik,2024-07-30 Providing a foundational understanding of how the human body is structured and functions at the cellular tissue organ and system levels this book is ideal for beginners in health sciences

The AH Receptor in Biology and Toxicology Raimo Pohjanvirta,2011-11-03 This book provides a thorough and up to date overview of the aryl hydrocarbon receptor AHR and its unique dual role in toxicology and biology The coverage includes epigenetic mechanisms gene expression reproductive and developmental toxicity signal transduction and transgenic animal models Featuring an internationally recognized team of authors at the forefront of AHR research this resource provides a comprehensive reference for readers interested in understanding the full spectrum of AHR from basic concepts toxicology analysis and models to polymorphism and related diseases

Evolution, Emerging Functions and Structure of Actin-Binding Proteins Lei-Miao Yin,Michael Schnoor,Chang-Duk Jun,2022-02-02 Neural-Immune Interactions in Brain Function and Alcohol Related Disorders Changhai Cui,Lindsey Grandison,Antonio Noronha,2012-11-14 Recent studies have provided clear evidence on the role of neural immune interactions in normal brain function and neuropathological conditions Neuroimmune factors which play an essential role in neuroinflammatory response have been implicated in the regulation of

neuronal function and plasticity Thus neural immune interactions provide a new frame work for understanding the role of the neuroimmune system in normal brain function neurodevelopment and a variety of neurological disorders These advances have a far reaching impact on many areas of neuroscience including alcohol research Studies using human alcoholic brains gene knockout mice and gene expression profiling have established a clear link between alcoholism and an altered neuroimmune profile This book integrates emerging knowledge on neural immune interactions with key discoveries in alcohol research and provides a comprehensive overview of neural immune interactions in brain function and behavior associated with alcohol use disorders While Neural Immune Interaction in Brain Function and Alcohol Related Disorders focuses on neural immune interactions in areas directly related to alcohol use disorders it is not intended to be all inclusive Several areas including sleep disorders pain and cholinergic anti inflammatory pathways are not covered as independent chapters but briefly mentioned in the text The close relevance of these topics to neural immune interactions and alcohol use disorders warrants future discussion and more research efforts
