

7. Consider an LC circuit, with inductance  $L = 0.1 \text{ H}$  and capacitance  $C = 10^{-3} \text{ F}$ , kept on a plane. The area of the circuit is  $1 \text{ m}^2$ . It is placed in a constant magnetic field of strength  $B_0$  which is perpendicular to the plane of the circuit. At time  $t = 0$ , the magnetic field strength starts increasing linearly as  $B = B_0 + \beta t$  with  $\beta = 0.04 \text{ Ts}^{-1}$ . The maximum magnitude of the current in the circuit is \_\_\_\_\_ mA.

Answer (04.00)

**Sol.** Emf induced in the circuit is

$$\begin{aligned} |E| &= \left| \frac{d\phi}{dt} \right| = \frac{d}{dt} ((B_0 + \beta t) A) \\ &= \beta \times A \\ &= 0.04 \text{ V} \end{aligned}$$

So the circuit can be rearranged as

Using Kirchhoff's law we can write

$$E = L \frac{di}{dt} + \frac{q}{C}$$

$$L \frac{di}{dt} = E - \frac{q}{C}$$

$$\text{Or } \frac{d^2 q}{dt^2} = -\frac{1}{LC} (q - CE)$$

Using SHM concept we can write

$$q = CE + A \sin(\omega t + \phi) \left( \text{where } \omega = \frac{1}{\sqrt{LC}} \right)$$

$$\text{at } t = 0, q = 0 \text{ \& } i = 0$$

$$\text{So } A = CE \text{ \& } \phi = -\frac{\pi}{2}$$

$$q = CE - CE \cos \omega t$$

$$\text{so } i = \frac{dq}{dt} = CE \omega \sin \omega t$$

$$\begin{aligned} \text{so } i_{\max} &= \frac{10^{-3} \times 0.04}{\sqrt{0.1 \times 10^{-3}}} \\ &= 4 \text{ mA} \end{aligned}$$

Mathematical Questions and Solutions, from "The Educational Times", with Many Papers and Solutions in Addition to Those Published in "The Educational Times" ... ,1893      **Selected Papers, Volume 7** Subrahmanyam

Chandrasekhar,1997-06-09 In these selections readers are treated to a rare opportunity to see the world through the eyes of one of the twentieth century's most brilliant and sensitive scientists. Conceived by Chandrasekhar as a supplement to his Selected Papers, this volume begins with eight papers he wrote with Valeria Ferrari on the non-radial oscillations of stars. It then explores some of the themes addressed in *Truth and Beauty* with meditations on the aesthetics of science and the world it examines. Highlights include *The Series Paintings of Claude Monet and the Landscape of General Relativity*, *The Perception of Beauty and the Pursuit of Science*, *On Reading Newton's Principia at Age Past Eighty* and personal recollections of Indira Gandhi, Jawaharlal Nehru and others. *Selected Papers, Volume 7* paints a picture of Chandra's universe filled with stars and galaxies but with space for poetics, paintings and politics. The late S Chandrasekhar was best known for his discovery of the upper limit to the mass of a white dwarf star for which he received the Nobel Prize in Physics in 1983. He was the author of many books including *The Mathematical Theory of Black Holes* and most recently *Newton's Principia for the Common Reader*.

Selected Papers, Volume 1 Subrahmanyam Chandrasekhar,1989-04-28 This is the first of six volumes collecting significant papers of the distinguished astrophysicist and Nobel laureate S Chandrasekhar. His work is notable for its breadth as well as for its brilliance; his practice has been to change his focus from time to time to pursue new areas of research. The result has been a prolific career full of discoveries and insights, some of which are only now being fully appreciated. Chandrasekhar has selected papers that trace the development of his ideas and that present aspects of his work not fully covered in the books he has periodically published to summarize his research in each area. Volume 1, *Stellar Structure and Stellar Atmospheres*, covers primarily the period 1930-40 and includes early papers on the theory of white dwarfs. In the Preface, Chandrasekhar explains the criteria for selection and provides historical background. Each subsequent volume will include a foreword by an authority on the topics covered.      *STPM 2019 Term 2 Mathematics (T) Past Year Solution (Sort by Year)* KK LEE, STPM Past Year Question and Solutions sorted by year from 2013 to 2018

**Selected Papers, Volume 5** Subrahmanyam Chandrasekhar,1990-05-11 This is the fifth of six volumes collecting significant papers of the distinguished astrophysicist and Nobel laureate S Chandrasekhar. His work is notable for its breadth as well as for its brilliance; his practice has been to change his focus from time to time to pursue new areas of research. The result has been a prolific career full of discoveries and insights, some of which are only now being fully appreciated. Chandrasekhar has selected papers that trace the development of his ideas and that present aspects of his work not fully covered in the books he has periodically published to summarize his research in each area. Volume 5 covers all of Chandrasekhar's contributions to the general theory of relativity and relativity's astrophysical applications except his research on black holes and colliding gravitational waves.

which is covered in Volume 6 The major topics include the influence of general relativity on the pulsations and stability of stars the back reaction of gravitational waves on their sources and post Newtonian approximations to general relativity and their astrophysical applications In addition to research papers the volume includes two 1972 lectures in which Chandrasekhar assessed the past present and future of relativistic astrophysics The foreword by astrophysicist Kip S Thorne is an absorbing brief history of the field since 1961 capturing the atmosphere of the early research and clarifying Chandrasekhar's dominant role in it Chandrasekhar has never written a monograph synthesizing his research in relativistic astrophysics and therefore this volume of his papers serves as a summary of that work for students and more senior researchers Scientific Papers of the Bureau of Standards United States.
