**Social Insecurity among the Vulnerable Groups in Tanzania** Dr David Henry Kanyumi, 2024-10-28 Dr David Henry Kanyumi author of *Social Insecurity among the Vulnerable Groups in Tanzania* speaks from an authentic point of view to engage and inform readers of Tanzania's current social problems and how they can be fixed. Here he provides a unique insight into the lives of everyone from street orphans to battered women as drawn from research and interviews. Standing alone as his first book, it takes readers into a country's seldom-discussed areas. *Science Education in Context* Richard K. Coll, Neil Taylor, 2019-02-18 This book presents an international perspective of the influence of educational context on science education. The focus is on the interactions between curriculum development and implementation, particularly in non-Western and non-English speaking contexts, i.e. outside the UK, USA, Australia, NZ, etc. An important and distinguishing feature of the book is that it draws upon the experiences and research from local experts from an extremely diverse cohort across the world, 26 countries in total. The book addresses topics such as curriculum development, research or evaluation of an implemented curriculum, discussion of pressures driving curriculum reform or implementation of new curricula, e.g. technology or environmental education, the influence of political, cultural, societal or religious mores on education, governmental or ministerial drives for curriculum reform, economic or other pressures driving curriculum reform, the influence of external assessment regimes on curriculum, and so on. *Shallow-water Holothuroidea (Echinodermata) from Kenya and Pemba Island, Tanzania* Yves Samyn, 2003 Holothuroidea, commonly known as sea cucumbers, make up one of the five extant classes of echinoderms. As a highly successful group, these animals have colonized the whole marine realm from the intertidal zone to the deep ocean trenches and from the poles to the tropics. So far, some 1600 species have been described worldwide. However, notwithstanding the fact that in the past two centuries many notable naturalists have turned their attention to the holothuroid fauna of the Indo-Pacific, the shallow water up to 50m depth holothuroid fauna of Kenya was only known from a few publications, while that of Pemba Island, Tanzania, has never been the subject of any study. In order to rectify this situation, several sampling trips to Kenya and Pemba Island have been organized in recent years. These expeditions resulted in an important reference collection that enabled us to recognize new taxa, to add new records to the local fauna, and to clarify some long-standing systematic uncertainties. *Biodiversity and Conservation Along an East African Railway* Catherine Aloyce Masao, Joel Nobert, Flora John Magige, 2024-11-06 It is well known that infrastructure development projects can boost the economy and reduce the cost of trade in both developing and developed economies; however, infrastructure projects can also cause biodiversity loss. This book is the result of an important biodiversity survey conducted along an East African railway in Tanzania. The building of the railway, still under construction, has already led to habitat loss, habitat degradation, and landscape change, which may have affected biodiversity. The book includes recommendations to mitigate the effect of railway construction by protecting biodiversity and ecosystem services, which could have major implications across Africa and

other regions National and international scientists decision and policy makers as well as ecologists and conservation managers involved in large infrastructure projects will find this book invaluable The book provides baseline information and can be used as a case study for other infrastructure development projects around the world **Tanzania Notes and Records** ,1976 *Soil and Fertilizers* Rattan Lal,2020-05-06 *Soil and Fertilizers Managing the Environmental Footprint* presents strategies to improve soil health by reducing the rate of fertilizer input while maintaining high agronomic yields It is estimated that fertilizer use supported nearly half of global births in 2008 In a context of potential food insecurity exacerbated by population growth and climate change the importance of fertilizers in sustaining the agronomic production is clear However excessive use of chemical fertilizers poses serious risks both to the environment and to human health Highlighting a tenfold increase in global fertilizer consumption between 2002 and 2016 the book explains the effects on the quality of soil water air and biota from overuse of chemical fertilizers Written by an interdisciplinary author team this book presents methods for enhancing the efficiency of fertilizer use and outlines agricultural practices that can reduce the environmental footprint Features Includes a thorough literature review on the agronomic and environmental impact of fertilizer from degradation of ecosystems to the eutrophication of drinking water Devotes specific chapters to enhancing the use efficiency and effectiveness of the fertilizers through improved formulations time and mode of application and the use of precision farming technology Reveals geographic variation in fertilizer consumption volume by presenting case studies for specific countries and regions including India and Africa Discusses the pros and cons of organic vs chemical fertilizers innovative technologies including nuclear energy and the U N s Sustainable Development Goals Part of the *Advances in Soil Sciences* series this solutions focused volume will appeal to soil scientists environmental scientists and agricultural engineers

Advances in Enzymology and Related Areas of Molecular Biology is a seminal series in the field of biochemistry offering researchers access to authoritative reviews of the latest discoveries in all areas of enzymology and molecular biology These landmark volumes date back to 1941 providing an unrivaled view of the historical development of enzymology The series offers researchers the latest understanding of enzymes their mechanisms reactions and evolution roles in complex biological process and their application in both the laboratory and industry Each volume in the series features contributions by leading pioneers and investigators in the field from around the world All articles are carefully edited to ensure thoroughness quality and readability With its wide range of topics and long historical pedigree Advances in Enzymology and Related Areas of Molecular Biology can be used not only by students and researchers in molecular biology biochemistry and enzymology but also by any scientist interested in the discovery of an enzyme its properties and its applications

The political economy of food and nutrition policies Per Pinstrup-Andersen, 1993-01-01 Few nutritionists and economists fully appreciate how the political environment shapes policy and subsequently affects the relevance of their policy recommendations When governments fail to follow the recommendations of nutritionists and economists and are unable to design and implement cost effective nutrition programs and policies it is often attributed to politics or to lack of political will on the part of decisionmakers Past nutrition planning efforts frequently failed to understand the goals and behavior of the various agents and institutions inside and outside the government that in the final analysis determine whether the planning effort is successful In The Political Economy of Food and Nutrition Policies Per Pinstrup Andersen brings together a group of distinguished authorities to improve the understanding of how nutrition policies are formulated within larger political and economic contexts and how public sector agencies behave with regard to food and nutrition

**The Annotated Old Four Legs: The story of the coelacanth** Mike Bruton, 2017-11-01 When the famous South African fish scientist Professor JLB Smith published Old Fourlegs The Story of the Coelacanth in 1956 he created an international sensation After all this 400 million year old fish known only from fossil remains was thought to have become extinct around 66 million years ago JLB

Smith's dramatic account of the discovery of the first and second coelacanths in 1938 and 1952 turned him into a cult figure and put South African science on the world map. His book was eventually published in six English editions and translated into nine foreign languages. Mike Bruton's *The Annotated Old Fourlegs* includes a facsimile reprint of the original book to which he has added notes and images in the margins that provide an interesting and revealing commentary on Smith's text as well as new introductory and explanatory chapters that bring the coelacanth story up to date.

**Ecological Aspects of Social Evolution** Daniel I. Rubenstein, Richard W. Wrangham, 2014-07-14 Seeking common principles of social evolution in different taxonomic groups the contributors to this volume discuss eighteen groups of birds and mammals for which long term field studies have been carried out. They examine how social organization is shaped by the interaction between proximate ecological pressures and culture the social traditions already in place and shaped by local and phylogenetic history. Originally published in 1987 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

**Conference on Anopheline Biology and Malaria Eradication** Ronald A. Ward, John E. Scanlon, 1970-05-20 Malaria control and eradication have achieved noteworthy successes in such diverse areas as Venezuela and Taiwan. However in many portions of the world malaria control has reached a state of stagnation and even retreat. The reasons are manifold but in the main arise from problems which have been evident in the biology of the parasite and the anopheline vector. The discovery of resistance to drugs and insecticides serves to amplify these problems. Breakdowns of antimalaria programs based on vector control have been especially serious in Africa. It is not always clear why these campaigns fail or what can be done about it now. Prospects for future control may improve provided further research is accomplished. As a means of delineating the present status of the biology and control of malaria vectors and providing a platform for the discussion of areas for further study which may provide practical means of interrupting transmission by controlling or eradicating the vector a Conference on Anopheline Biology and Malaria Eradication was organized. It is hoped that the recommendations which developed from this conference will stimulate further entomological research along those channels which appeared to be most promising to the conferees.

*Knowing Nature* Mara J. Goldman, Paul Nadasdy, Matthew D. Turner, 2011-04-15 In addition they examine how various environmental knowledge claims are generated, packaged, promoted and accepted or rejected by the different actors involved in specific cases of environmental management, conservation and development.

**Soil Degradation and Restoration in Africa** Rattan Lal, B. A. Stewart, 2019-07-09 Soil degradation is a widespread problem in Africa resulting in decreased agricultural productivity while demand for food continues to increase. Degradation is caused by accelerated erosion, acidification,

contamination depletion of soil organic matter and plant nutrients and salinization The major cause of soil degradation in Africa is uncontrolled and excessive grazing in the savanna regions followed by deforestation and the use of inappropriate and extractive farming practices Perpetual neglect of the health of soils in Africa can exacerbate the already serious problems of food and nutritional insecurity and environmental degradation Food and nutritional security of the growing population of Africa can only be achieved if degraded soils are restored and soils of agroecosystems are managed prudently and sustainably Ignoring soils and taking the fragile finite and precious soil resources for granted is the principal cause of poverty hunger and environmental degradation The downward spiral must be reversed through soil restoration measures based on translating science into action This book describes the soils of Africa processes of soil degradation extent and severity of soil degradation and the impacts of degradation processes on food and nutritional security Features Explores the extent and severity of soil degradation in Africa Analyzes the cause effect relationship between anthropogenic activities and soil degradation Reviews processes of soil degradation in Africa including erosion salinization nutrient depletion and decline of soil organic matter Addresses the effect of climate change on soil degradation in Africa Explains how soil degradation causes food and nutritional insecurity Part of the Advances in Soil Sciences series this volume is specifically devoted to the processes and factors that cause soil degradation and the challenges and potential for remediation and restoration of soil health in Africa

*Anthropology and Cryptozoology* Samantha

Hurn,2016-11-03 Cryptozoology is best understood as the study of animals which in the eyes of Western science are extinct unclassified or unrecognised In consequence and in part because of its selective methods and lack of epistemological rigour cryptozoology is often dismissed as a pseudo science However there is a growing recognition that social science can benefit

from engaging with it for as social scientists are very well aware scientific categorisation and explanation represents just one of a myriad of systems used by humans to enable them to classify and make sense of the world around them In many cultural contexts myth folk classification and lived experience challenge the truth expounded by scientists With a reflexive anthropological approach and drawing on rich empirical and ethnographic studies from around the world this volume engages with the theoretical and methodological issues raised by reported sightings of unrecognised animals Bringing into sharp focus the anthropological value and challenges for methodology posed by beliefs about unclassified creatures Anthropology and Cryptozoology Exploring encounters with mysterious creatures will be of interest to anthropologists sociologists and geographers working in the fields of research methods anthrozoology mythology and folklore and human animal interaction
