Carpenter, James M. Moser, Thomas A. Romberg, 2020-08-15 A hallmark of much of the research on children's thinking in the 1970s had been the focus on explicit content domains Much of this research had been represented by an eclectic collection of studies sampled from a variety of disciplines and content areas However in the few years before this publication research in several content domains has begun to coalesce into a coherent body of knowledge Originally published in 1982 the chapters in this work represent one of the first attempts to bring together the perspectives of a variety of different researchers investigating a specific well defined content domain This book presents theoretical views and research findings of a group of international scholars who are investigating the early acquisition of addition and subtraction skills by young children Together the contributors bring a blend of psychology educational psychology and mathematics education to this topic Fields of interest such as information processing artificial intelligence early childhood and classroom teaching and learning are included in this blend **First in the Field** Robin Lea Pyle, 2019-07-15 First in the Field Breaking Ground in Computer Science at Purdue University chronicles the history and development of the first computer science department established at a university in the United States The backdrop for this groundbreaking academic achievement is Purdue in the 1950s when mathematicians statisticians engineers and scientists from various departments were searching for faster and more efficient ways to conduct their research These were fertile times as recognized by Purdue's President Frederick L. Hovde whose support of what was to become the first university centered computer center in America laid the foundation for the nation's first department of computer science The book pulls together strands of the story from previously unpublished texts and photographs as well as published articles and interviews to provide the first complete historical account of the genesis of the Department of Computer Sciences at Purdue and its continued growth up to the present It is a fascinating story with parallels to the space race involving many players some of whose contributions have gone previously unacknowledged in the heat of the race Filled with unique historical anecdotes detailing the challenges of legitimizing the new academic field these stories bring to life the strong convictions of a group of pioneering thinkers that continue to resonate for us today The raw determination required to transform a computing laboratory that offered early programming courses into a full fledged computer center and a department offering degrees in computer science characterizes this story of interest to anyone intrigued by the pathways creativity takes in scientific endeavors It is a story that matters because it was and is an ongoing achievement of leadership in education and research in a field that has totally revolutionized our society *The Builder*, 1885 The Diagnostic Teacher Mildred Z. Solomon, 1999 This provocative new volume from one of the nation's leading educational think tanks presents in depth portraits of teachers professional development staff and researchers working together to deepen teacher's professional capacities and students learning experiences Ranging across subject areas and grade levels The Diagnostic
