

When "Differential-Lock" is selected on the switch, power is removed from the electrical solenoid allowing the solenoid plunger to retract. Spring tension moves the shift fork back into place and engages the engagement dog to the side gear that is part of the planetary differential assembly. This locks the rear differential as a solid rear axle, increasing traction.

When switch position is set to "Lock", power is removed from the solenoid and the plunger retracts to engage the clutch gear and lock the differential.

Transmission Removal
