Bansal, Praveen Kumar, Xiangning He, 2025-03-21 Handbook on New Paradigms in Smart Charging for E-Mobility Global Trends Policies and Practices provides a complete package for understanding and developing smart chargers for e-mobility applications. It discusses various concepts required for developing charging infrastructure and usage of different kinds of storage technologies, power electronics, converters, controllers, communication requirements, grid infrastructure, sustainable technologies, policy frameworks, and all other related crucial aspects of E-mobility. Each part of the book covers a subdomain of e-mobility, beginning with an introductory chapter reviewing existing literature; the subsequent chapters are arranged to each follow the previous one. Other available books focus on specific technical subdomains of e-mobility, but none provides the wider outlook to meet the requirements of all audiences. This book uniquely brings together topics that are not otherwise easily accessible or available to these audiences. This book will be beneficial for engineers, scientists, and researchers, providing them with a comprehensive standard benchmark work to explore the evolving aspects of charging infrastructure for e-mobility. Further, it will also help policymakers, practitioners, and government entities formulate policies for successful implementations of e-mobility for their masses. The techno-socio-economic focus will serve as standard literature for all. Takes a modular approach with each module catering to a different subdomain of e-mobility. Includes standalone chapters that cover out-of-the-box work related to e-mobility. Presents the latest advances and detailed technical descriptions of smart charging infrastructures.

Post-Oil Energy Technology Bela G. Liptak, 2018-10-08 A solution to the climate and energy crisis The reversible fuel cell RFC described in this volume stores solar energy and thereby makes it continuously available This can make the building of energy free homes and all electric transportation a reality The foldout drawing at the back of this book also describes the detailed design of the world s first 1 000 megawatt solar hydrogen power plant How is this possible Our planet receives more solar energy in an hour than humans use in a year In fact 5% of the Sahara could meet the total energy requirement of mankind This energy can then be stored and transported in the form of hydrogen Converting from an exhaustible energy economy to a clean free and inexhaustible one In this timely book author Bela Liptak explains why a solar hydrogen economy is technically feasible and cost effective He first outlines existing conservation technologies and renewable energy processes as well as evolving technologies such as energy free homes roof shingle solar collectors and RFCs He goes on to discuss energy optimization techniques that could reduce the global energy consumption by one third and finally presents the detailed design of a full size solar hydrogen power plant It is time to harness the power of solar energy With global energy consumption quadrupling in the last fifty years and atmospheric carbon dioxide reaching the highest level ever recorded now is the time to prevent further damage to the planet and ensure the survival of human civilization It is debatable how much time we have before our fossil and uranium deposits are exhausted It is also debatable how much climate change we can live

with or how much of our economic resources should be devoted to stabilizing and reversing mankind's growing carbon footprint. What is not debatable is that our resources are exhaustible and that we must not give reason for our grandchildren to ask, "Why did you not act in time?"
