## Power Flow in Reverse

The lined plates of the reverse clutch are connected to the ring gear and the steel plates are connected to the transmission housing.

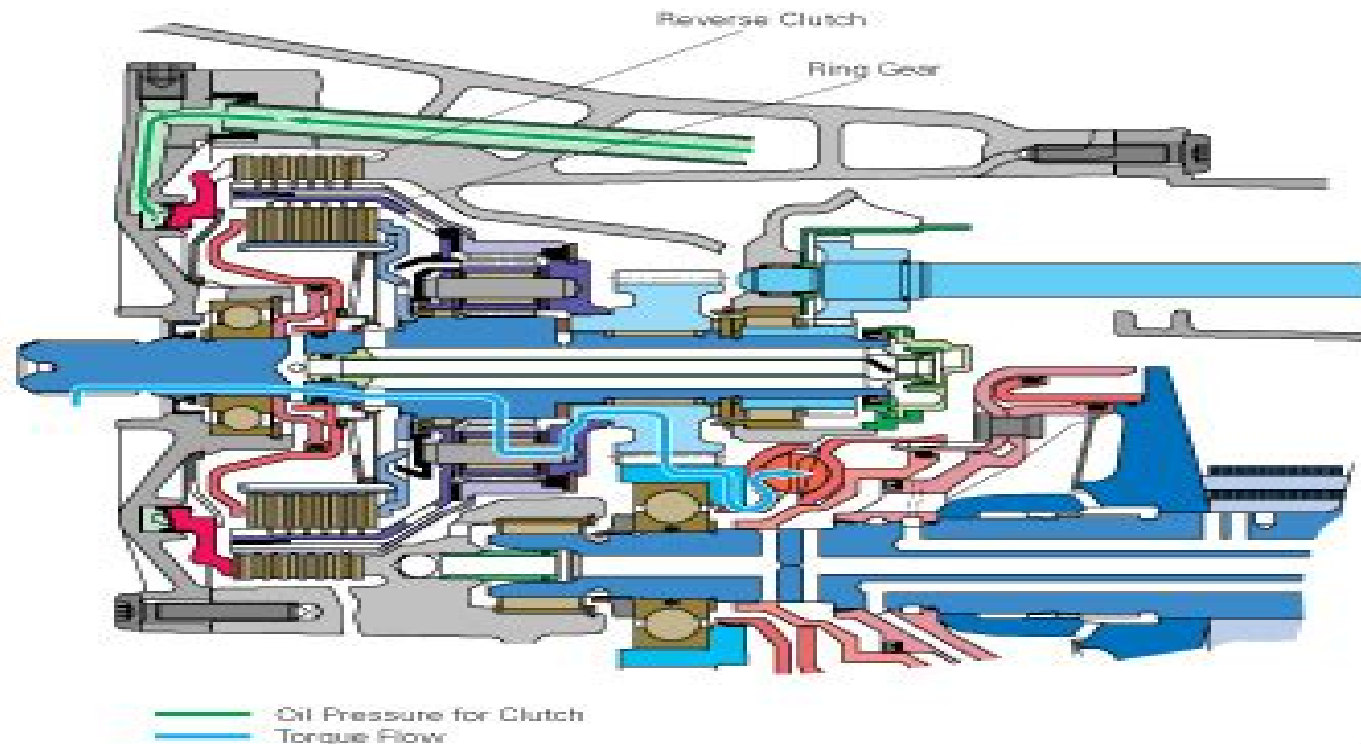

When the reverse clutch engages, it holds the ring gear and thereby prevents the transmission housing from rotating.

Torque is then transmitted to the planet carrier, which begins to rotate in the opposite direction to the engine. The vehicle moves in reverse.

Road speed is limited electronically when the vehicle is in reverse.

The Variator remains in the starting torque ratio.
