Proceedings of the EAA Joint Symposium on Auralization and Ambisonics 2014 Weinzierl, Stefan , Vorländer, Michael , Zotter, Franz, Maempel, Hans-Joachim , Lindau, Alexander , 2014 In consideration of the remarkable intensity of research in the field of Virtual Acoustics including different areas such as sound field analysis and synthesis spatial audio technologies and room acoustical modeling and auralization it seemed about time to organize a second international symposium following the model of the first EAA Auralization Symposium initiated in 2009 by the acoustics group of the former Helsinki University of Technology now Aalto University Additionally research communities which are focused on different approaches to sound field synthesis such as Ambisonics or Wave Field Synthesis have in the meantime moved closer together by using increasingly consistent theoretical frameworks Finally the quality of virtual acoustic environments is often considered as a result of all processing stages mentioned above increasing the need for discussions on consistent strategies for evaluation Thus it seemed appropriate to integrate two of the most relevant communities i e to combine the 2nd International Auralization Symposium with the 5th International Symposium on Ambisonics and Spherical Acoustics The Symposia on Ambisonics initiated in 2009 by the Institute of Electronic Music and Acoustics of the University of Music and Performing Arts in Graz were traditionally dedicated to problems of spherical sound field analysis and re synthesis strategies for the exchange of ambisonics encoded audio material and more than other conferences in this area the artistic application of spatial audio systems This publication contains the official conference proceedings It includes 29 manuscripts which have passed a 3 stage peer review with a board of about 70 international reviewers involved in the process Each contribution has already been published individually with a unique DOI on the DepositOnce digital repository of TU Berlin Some conference contributions have been recommended for resubmission to Acta Acustica united with Acustica to possibly appear in a Special Issue on Virtual Acoustics in late 2014 These are not published in this collection

Computer Music Instruments II Victor Lazzarini, 2019-03-28 This book is divided into two

parts The chapters in Part I offer a comprehensive introduction to the C language and to fundamental programming concepts followed by an explanation of realtime audio programming including audio synthesis and processing The chapters in Part II demonstrate how the object oriented programming paradigm is useful in the modelling of computer music instruments each chapter shows a set of instrument components that are paired with key C programming concepts Ultimately the author discusses the development of a fully fledged object oriented library Together with its companion volume Computer Music Instruments Foundations Design and Development this book provides a comprehensive treatment of computational instruments for sound and music It is suitable for advanced undergraduate and postgraduate students in music and signal processing and for practitioners and researchers Some understanding of acoustics and electronic music would be helpful to understand some applications but it is not strictly necessary to have prior knowledge of audio DSP or programming while C C programmers with no experience of audio may be able to start reading the chapters that deal with sound and music computing Linux Journal ,2000-07 *AUUGN* ,2003-06 *A NIME Reader* Alexander Refsum Jensenius,Michael J.
