Wilson, 2023-11-07 Explore the fascinating evolving world of electric vehicles from the first EVs in the Victorian era to their rapid expansion today and beyond In *The Electric Vehicle Revolution* automotive journalist Kevin Wilson provides a thorough engaging overview of where EV technology is today how it got there and where it s going Since the turn of the twenty first century EVs have gone from wonky who cares vehicles like GM s EV1 and early Teslas to every manufacturer s must have future Electric propulsion preceded fossil fuel cars by decades and even vied for prominence in the early twentieth century auto industry against both steam power and internal combustion engines From Electrobat an early New York taxi fleet through Columbia which had built 1 000 electric cars before either Henry Ford or Ransom Olds had built a single gasoline car viable business start ups in the early auto age were as competitive and innovative as those in early twenty first century Silicon Valley But it was not to be for electric cars in the early days of the 1900s as the auto industry evolved to favor gasoline cars thanks in part to the influence of the oil industry and the build out of infrastructure to supply fuel across the country Gas powered cars may have won the day but post WWII experiments with electric cars continued both within the established auto industry and from outside firms and visionaries including cars developed by General Electric Sears and the Henney Kilowatt alongside Ford and GM experimentals Rapidly evolving electronic technology beginning in the 1960s along with growing concerns about emissions and pollution set the stage for renewed interest in electric cars Improved batteries for cellphones laptops electronic controls computing and beyond provided the impetus for a wave of more sophisticated and

feasible electric vehicles including GM's EV1 and the first Tesla. Elon Musk's Tesla Motors proves the auto industry disruptor and sets the stage for responses by the mainstream auto industry including Nissan's Leaf, Chevrolet's Bolt and a host of high end EVs from companies like Audi, Jaguar and the like. Rival start ups step in as well and government incentives, subsidies and regulatory demands all drive unprecedented development. Today the rush to electrify has nations and companies competing to see who can declare the earliest end to internal combustion engines but this radical transition won't be as easy as throwing a switch. *The Electric Vehicle Revolution* thoroughly explores the challenges of infrastructure, battery and vehicle tech and the cost to consumers as well as the long phase in as EVs are set to replace existing gas cars over decades. Connecting Places, Connecting People Reena Tiwari, 2017-09-07 What is a better community How can we reconfigure places and transport networks to create environmentally friendly economically sound and socially just communities How can we meet the challenges of growing pollution depleting fossil fuels rising gasoline prices traffic congestion traffic fatalities increased prevalence of obesity and lack of social inclusion The era of car based planning has led to the disconnection of people and place in developed countries and is rapidly doing so in the developing countries of the Global South The unfolding mega trend in technological innovation while adding new patterns of future living and mobility in the cities will question the relevance of face to face connections What will be the glue that holds communities together in the future To build better communities and to build better cities we need to reconnect people and places Connecting Places Connecting People offers a new paradigm for place making by reordering urban planning principles from prioritizing movement of vehicles to focusing on places and the people who live in them Numerous case studies

including many from developing countries in the Global South illustrate how this can be realized or fallen short of in practical terms. Importantly, citizens need to be engaged in policy development to connect with each other and with government agencies. and Canada A.J. Jacobs, 2015-12-16 Over the past forty years, state, provincial, and local governments in the United States and Canada have provided foreign automakers with approximately 480 billion in incentives in order to lure light vehicle assembly plants to their areas. This has included tax abatements, infrastructure construction, land giveaways, job training programs, and other subsidies. As of early 2015, ten foreign vehicle makers operated 20 light vehicle plants in developed North America. Despite the fact that all ten of these automakers have pursued a similar pattern—first exporting vehicles into the United States and Canada before launching vehicle plants in developed North America—each has followed its own specific historical development path and has created its own unique growth trajectory. This book provides a unique historical and qualitative review of these ten vehicle makers from their early beginnings to their export entry into the United States and Canada through early 2015. In addition, it chronicles the histories of more than a dozen former automakers and potential future foreign light motor vehicle assembly plants in the United States and Canada. This includes the first foreign automaker to build its cars in the United States, De Dion Bouton of France, in July 1900; the early 20th Century endeavors of Fiat, Mercedes, and Rolls Royce; and the present day hopes of Chinese and Indian automakers. In the process, the text also provides an assessment of the top competing states and sites for any future plants, the possible incentives packages governments may offer to attract such facilities, and an estimated incentive value for each automaker. Overall, the goal of this book is to expand the knowledge of policymakers at all tiers of government in the United States and Canada and to help them take a more holistic look at the pros and cons of attracting Automobile Manufacturing FDI. It is hoped that this will enable them to make more informed decisions when pursuing a new foreign motor vehicle assembly plant. Its findings should also prove informative to urban and regional planning, political science, sociology, economics, labor, and international development scholars and students in North America and worldwide.
