

Billing Guidelines for Wound Care

When medically justified and required, usually bill CPT 97597 and/or CPT 97598 for recurring wound debridement. Wet-to-dry dressings, the administration of drugs containing enzymes to disintegrate dead tissue, whirlpool baths, the scraping away of tissue with sharp instruments, incision, and drainage are all examples of procedures that fall under the purview of CPT codes 97597 and 97598. Only the dermis and epidermis are affected by these codes.

CPT codes 11042-11047 are used to charge for wound debridement procedures completed prior to topical or local anaesthetic administration. Debridement of wounds (11042-11047) are quantified by the depth of tissue removed and the size of the wound's surface. Record depth with the deepest level of tissue eliminated while debriding a single incision.

The cost of topical anaesthetic or localized infusion, such as a metatarsal/digital block, is covered by the payment for cleaning services and is not paid separately. It is not necessary to make a separate payment for anaesthesia given by the practitioner carrying out the debridement treatment.
