Campos-Peña,Marco Antonio Meraz-Ríos,Rosalinda Guevara-Guzmán,Karla Guadalupe Carvajal,2016-11-15 Chronic degenerative diseases are one of the major public health problems particularly those affecting the nervous system They are characterized by the degeneration of specific cell populations that include several pathologies which contribute significantly to morbidity and mortality in the elderly population Therefore in recent years the study of neuroscience has gained significant importance Most of these neurodegenerative disorders are the result of a complex interaction between genetic and environmental factors that generate progression and can even determine its severity The presence of mutations in genes as LRRK2 SNCA PARK7 PARK2 or PINK1 is associated with Parkinson s disease Mutations in genes such as APP PS1 and PS2 are associated with familial Alzheimer s disease while HTT gene mutations are the cause of Huntington s disease In most cases this condition is inherited in an autosomal dominant pattern which means one copy of the altered gene in each cell is sufficient to cause the disorder It is known that these mutations can also alter the proteins function however it has not yet been possible to fully understand how some genetic changes cause the disease or influence the risk of developing these disorders Most symptoms seen in these conditions occurs when specific nerve cells are damaged or die generating a loss in brain communication Also many of these mutations generate aggregation of intracellular or extracellular proteins affecting cell function and eventually causing neuronal death It is unclear whether the presence of these aggregates play an important role in nerve cell death during the development of neurodegenerative diseases or if they are simply part of the response of cells to the disease Other mutations affect the mitochondrial function generating alterations in energy production and promoting the formation of unstable molecules such as free radicals Under normal conditions the harmful effects caused by free radicals are offset within the cell However in pathological conditions the presence of mutations can alter this process by allowing the accumulation of radicals and damaging or killing cells On the other hand we also know that these diseases may not have a direct genetic component thus the study of sporadic type neurodegenerative diseases is much more complex Histopathological lesions as well as the cellular and molecular alterations are generally indistinguishable from familial cases For this reason it is important to understand the genetic and molecular mechanisms associated with this type of pathologies In this sense this issue aims to understand the molecular processes that occur in the brain and how these are influenced by the environment genetics and behavior      **Mitochondria and Endoplasmic Reticulum Dysfunction in Parkinson's Disease** Sandeep Kumar Barodia,Krishnan Prabhakaran,Smitha Karunakaran,Vikas Mishra,Victor Tapias,2020-01-23 Several

pathogenic mechanisms are involved in the pathogenesis of Parkinson's Disease PD a neurodegenerative disease characterized by the loss of substantial nigra SN dopamine DA neurons Alterations in calcium Ca<sup>2+</sup> homeostasis cellular proteostasis axonal transport mitochondrial function and neuroinflammation are linked to PD However research involving inter organelle communication and their significance as precise mechanisms underlying neuronal death in PD remain to be elucidated Evidence showed that perturbations in the mitochondria endoplasmic reticulum ER network play an important role in the pathogenesis of PD Alterations in the mitochondria ER interface have been reported in PARK2 knockout mice and patients harboring PARK2 mutations Enhanced parkin levels maintain mitochondria ER cross talk and assure regulated Ca<sup>2+</sup> transfer to sustain cell bioenergetics Several familial PD related proteins including Parkin and PINK1 may lead to modifications in the mitochondria ER signaling Interestingly mitochondria ER tethering suppresses mitophagy and parkin PINK1 dependent mechanism regulates the destruction of mitochondria ER contact sites by catalyzing a rapid burst of Mfn2 phospho ubiquitination to trigger p97 dependent disassembly of Mfn2 complexes from the outer mitochondrial membrane Mitofusin mediated ER stress elicited neurodegeneration in Pink1 Parkin models of PD Synuclein a presynaptic protein can bind to the ER mitochondria tethering protein vesicle associated membrane protein associated protein B VAPB to disrupt Ca<sup>2+</sup> homeostasis and mitochondrial ATP production It has been reported that ER stress and mitochondrial cell death pathways might mediate A53T mutant synuclein induced toxicity Mitochondria ER signaling mechanism is poorly characterized in neurons and its association in neuronal pathophysiology remains uncertain The presence of mitochondria ER contacts in neurons preferentially at synapses suggests a potential role in regulating synaptic activity Alterations in mitochondria ER associations are expected to be potentially detrimental to neurons especially to SN DA neurons Compounds from an unbiased chemical screen reverse both ER to Golgi trafficking defects and associated mitochondrial dysfunction in different PD models In addition a dibenzoylmethane derivative protects DA neurons against ER stress Thus mitochondria ER signaling may represent a possible upstream drug target as potential therapeutic strategy for PD In this Research Topic we bring together knowledge that emphasizes the importance of mitochondria ER communication and its impact to further dissect the pathogenic mechanisms in PD

**Environmental Impact of Ships** Stephen de Mora, Timothy Fileman, Thomas

Vance, 2020-11-05 Shipping is responsible for transporting 90% of the world's trade This book provides a comprehensive review of the impact shipping has on the environment Topics covered include pollutant discharges such as atmospheric emissions oil chemical waste sewage and biocides as well as non pollutant impacts including invasive species wildlife collisions noise physical damage and the environmental effects associated with shipwrecks and shipbreaking The history of relevant international legislation is also covered With chapters written by eminent international authors this book provides a global perspective on the environmental impact of ships making it a useful reference for advanced students and researchers of environmental science as well as practitioners of maritime law and policy and marine business
