This system is an electronically controlled camshaft timing system that allows variable timing for the intake and exhaust valves. The variable timing system and optimum engine performance, it is essential to adhere strictly to the valve timing adjustment procedures.

The valves are driven by a timing chain. The control unit drives the associated camshaft bearing cap. The timing chain is tensioned using a variable timing chain tensioner.

The intake camshaft is driven by a timing chain for the active camshaft bearing cap.

This CMP sensor monitors the valve cover.

Timing chain replacement does not require the variable camshaft timing control unit to be disconnected.
