Telemedicine in Low-Resource Settings, Volume 2 Richard Wootton, Laurent Bonnardot, Sophie Delaigue, 2020-04-24 Telemedicine networks to support healthcare workers in resource limited settings often for humanitarian purposes have evolved in a largely autonomous way Communication between the networks has been informal and relatively limited in scope This situation could be improved by developing a comprehensive approach to the collection and dissemination of information While many telemedicine networks remain experimental some have matured to become routine services which assist health care delivery in challenging environments For example there are a few networks which have been in operation for over a decade and provide store and forward telemedicine services to doctors in low and middle income countries These networks deliver clinically useful services and improved healthcare access However like much of telemedicine the formal evidence for their cost effectiveness remains weak Topics of current research interest therefore include the cost effectiveness of telemedicine in resource limited settings Other topics of interest concern outcomes data and methods for gathering it such as patient quality of life following a telemedicine episode the knowledge gain of healthcare staff involved in telemedicine and staff recruitment and retention in rural areas Finally there is little published information about the performance of these telemedicine networks and methods

for measuring it about how best to manage them and about how to share resources between them Following the previous volume this Research Topic will document current evidence supporting the use of telemedicine in resource limited settings

Everyday Lifestyles and Sustainability Fabricio Chicca,Brenda Vale,Robert Vale,2018-04-09 The impact of humanity on the earth overshoots the earth's bio capacity to supply humanity's needs meaning that people are living off earth's capital rather than its income However not all countries are equal and this book explores why apparently similar patterns of daily living can lead to larger and smaller environmental impacts The contributors describe daily life in many different places in the world and then calculate the environmental impact of these ways of living from the perspective of ecological and carbon footprints This leads to comparison and discussion of what living within the limits of the planet might mean Current footprints for countries are derived from national statistics and these hide the variety of impacts made by individual people and the choices they make in their daily lives This book takes a bottom up approach by calculating the footprints of daily living The purpose is to show that small changes in behaviour now could avoid some very challenging problems in the future Offering a global perspective on the question of sustainable living this book will be of great interest to anyone with a concern for the future as well as students and researchers in environmental studies human geography and development studies
