Gajski,Jianwen Zhu,Rainer Dömer,Andreas Gerstlauer,Shuqing Zhao,2012-12-06 For the near future the recent predictions and roadmaps of silicon semiconductor technology all agree that the number of transistors on a chip will keep growing exponentially according to Moore's Law pushing technology towards the system on a chip SOC era However we are increasingly experiencing a productivity gap where the chip complexity that can be handled by current design teams falls short of the possibilities offered by technological advances Together with growing time to market pressures this drives the need for innovative measures to increase design productivity by orders of magnitude It is commonly agreed that the solutions for achieving such a leap in design productivity lie in a shift of the focus of the design process to higher levels of abstraction on the one hand and in the massive reuse of predesigned complex system components intellectual property IP on the other hand In order to be successful both concepts eventually require the adoption of new languages and methodologies for system design backed up by the availability of a corresponding set of system level design automation tools This book presents the SpecC system level design language SLDL and the corresponding SpecC design methodology The SpecC language is intended for specification and design of SOCs or embedded systems including software and hardware whether using fixed platforms integrating systems from different IPs or synthesizing the system blocks from programming or hardware description languages SpecC Specification Language and Methodology describes the SpecC methodology that leads designers from an executable specification to an RTL implementation through a well defined sequence of steps Each model is described and guidelines are given for generating these models from executable specifications Finally the SpecC methodology is demonstrated on an industrial size example The design community is now entering the system level of abstraction era and SpecC is the enabling element to achieve a paradigm shift in design culture needed for system product design and manufacturing SpecC Specification Language and Methodology will be of interest to researchers designers and managers dealing with system level design design flows and methodologies as well as students learning system specification
