Northern Lights Donald E. Abelson, 2016-11-01 Think tanks are often thought of as a uniquely US phenomenon Although the largest concentration of think tanks is in the United States they can be found in virtually every country Often overlooked Canada's think tanks represent a highly diverse and eclectic group of public policy organizations such as the Canadian Centre for Policy Alternatives the C D Howe Institute the Fraser Institute and the Mowat Centre among others In *Northern Lights* Donald Abelson explores the rise of think tanks in Canada and addresses many of the most commonly asked questions about how and under what circumstances they are able to affect public opinion and public policy He identifies the ways in which Canadian think tanks often prioritize political advocacy over policy research and seeks to explain why these organizations are well suited and equipped to shape the discourse around key policy issues The first comprehensive examination of think tanks in Canada *Northern Lights* is both a primer for those looking to understand the role and function of think tanks in the policy making process and a guide to the leading policy institutes in the country **Progress in**

Outstanding Academic Titles *Samizdat* the production and circulation of texts outside official channels was an integral part of life in the final decades of the Soviet Union But as Josephine von Zitzewitz explains while much is known about the texts themselves little is available on the complex communities and cultures that existed around them due to their necessarily secretive and sometimes dissident nature By analysing the behaviours of different actors involved in *Samizdat* readers typists librarians and the editors of periodicals in 1970s Leningrad *The Culture of Samizdat* fills this lacuna in Soviet history scholarship Crucially as well as providing new insight into *Samizdat* texts the book makes use of oral and written testimonies to examine the role of *Samizdat* activists and employs an interdisciplinary theoretical approach drawing on both the sociology of reading and book history In doing so von Zitzewitz uncovers the importance of middlemen for *Samizdat* culture Diligently

researched and engagingly written this book will be of great value to scholars of Soviet cultural history and Russian literary studies alike

Control of Distributed Parameter and Stochastic Systems Shuping Chen, Xunjing Li, Jiongming Yong, Xun Yu Zhou, 2013-06-05 In the mathematical treatment of many problems which arise in physics economics engineering management etc the researcher frequently faces two major difficulties infinite dimensionality

and randomness of the evolution process Infinite dimensionality occurs when the evolution in time of a process is accompanied by a space like dependence for example spatial distribution of the temperature for a heat conductor spatial dependence of the time varying displacement of a membrane subject to external forces etc Randomness is intrinsic to the mathematical formulation of many phenomena such as fluctuation in the stock market or noise in communication networks Control theory of distributed parameter systems and stochastic systems focuses on physical phenomena which are governed by partial differential equations delay differential equations integral differential equations etc and stochastic differential equations of various types This has been a fertile field of research with over 40 years of history which continues to be very active under the thrust of new emerging applications Among the subjects covered are Control of distributed parameter systems Stochastic control Applications in finance insurance manufacturing Adapted control Numerical approximation It is essential reading for applied mathematicians control theorists economic financial analysts and engineers **Bridge**

Intelligent Information Processing and Web Mining Mieczyslaw A. Kłopotek, Sławomir T. Wierzchoń, Krzysztof Trojanowski, 2013-06-05 This volume contains articles accepted for presentation during The Intelligent Information Processing and Web Mining Conference IIS IIPWM 03 which was held in Zakopane Poland on June 2 5 2003 This conference

extends a series of 12 successful symposia on Intelligent Information Systems organized by the Institute of Computer Science of Polish Academy of Sciences devoted to new trends in broadly understood Artificial Intelligence. The idea of organizing such meetings dates back to 1992. Our main intention guided the first rather small audience workshop in the series was to resume the results gained in Polish scientific centers as well as contrast them with the research performed by Polish scientists working at the universities in Europe and USA and their foreign collaborators. This idea proved to be attractive enough that we decided to continue such meetings. As the years went by the workshops have transformed into regular symposia devoted to such fields like Machine Learning, Knowledge Discovery, Natural Language Processing, Knowledge Based Systems and Reasoning and Soft Computing i.e. Fuzzy and Rough Sets, Bayesian Networks, Neural Networks and Evolutionary Algorithms. At present about 50 papers prepared by researchers from Poland and other countries are usually presented. This year conference is an attempt to draw a much broader international audience on the one hand and to devote much more attention to the newest developments in the area of Artificial Intelligence. Therefore special calls for contributions on artificial immune systems and search engines.

The conference provided a platform for some 200 participants to discuss the theoretical and computational aspects of research in artificial intelligence, big data and algorithms, reviewing the present status and future perspectives of the field. A total of 362 submissions were received for the conference of which 148 were accepted following a thorough double blind peer review. Topics covered at the conference included artificial intelligence tools and applications, intelligent estimation and classification, representation formats for multimedia, big data, high performance computing and mathematical and computer modeling among others. The book provides a comprehensive overview of this fascinating field, exploring future scenarios and highlighting areas where new ideas have emerged over recent years. It will be of interest to all those whose work involves artificial intelligence, big data and algorithms.
