

Solution Stoichiometry
Chem Worksheet 15-6

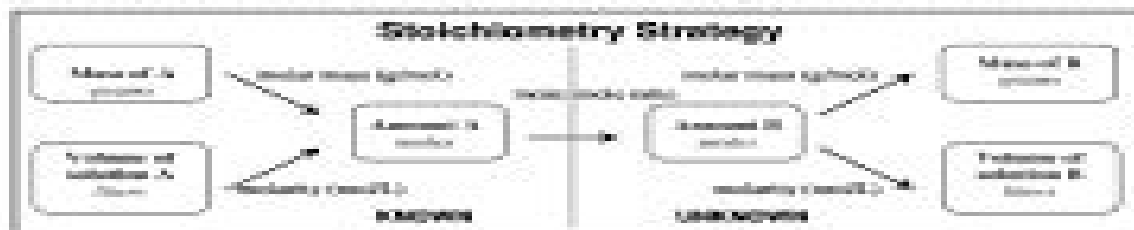

Name: _____

The molarity of a solution is a ratio of the moles of solute per liters of solution. The units for molarity are written as mol/L, or *M*. This measurement is used to perform stoichiometric calculations. The strategy used for solving these solution stoichiometry problems is to set up the problem so that the units cancel.

When the volume of a solution is multiplied by the molarity of a solution the resulting units are moles. A balanced equation allows us to convert from moles of a known substance to moles of an unknown. Finally, the moles of an unknown substance can be converted into grams, liters of solution, molarity, or other units.
