## **Sensation and Perception #1**

1. What are our five main senses?
  - Vision, hearing, touch, smell, taste
2. What does the area of Sensation and Perception examine?
  - Processes of identifying objects and events in the world so that we can move through our environment and take action
3. Why do we study sensation and perception?
  - Helps us understand behavior and mental activity, which depend on our ability to gather information about the world
  - Helps us understand how our sensory systems should work and how to fix them
  - Better ways of presenting info to people
4. What is sensation?
  - Occurs in an organism when physical energy produce some kind of change in specialized elements of the nervous system called "receptors"
  - Basic detection of physical energy
5. What is perception?
  - The results of psychological processes in which sensations are interpreted and organized to give meaning to the objects or events that produced the sensations
  - Gives more meaning to an event
  - Sensations that are shaped by context, relationships, expectations and memory
  - Top-down: influence of cognition
  - Bottom-down: influence of the stimulus
6. What is transduction?
  - Conversion of physical energy into electrical energy in the nervous system
7. What are the different ways to measure perception?
  - Phenomenological methods: show a stimulus and then ask the person to describe it
  - Works easy for simple stimuli, but not very precise or good for complex stimuli
  - Also doesn't work well with animals
8. What is the field of psychophysics?
  - The study of the relationship between a physical stimulus and the resulting psychological experiences
  - Objectively measure the stimulus (quantification) and the response
9. What is the difference between detection and discrimination?
  - Detection: smallest/ weakest stimulus that we can detect
