Mathematics I and its complement volume Intermediate Mathematics II systematically describe concepts and tools that are crucial to every college student who is willing to attain a solid base for more advanced mathematical topics. They aim to give the reader a comprehensive view of mathematics, its use, and its role in computation. These two books cooperatively may be different than other mathematics textbooks. Every chapter starts with a romantic poem. Researchers have discovered that contemplating poetic imagery and the multiple layers of meanings in poems activates specific areas of the brain that help us to interpret our everyday reality. In these books, every topic is assisted by several examples. After presentation of concepts and tools, each chapter is proceeded with different real-life applications of the topics. Finally, each chapter concludes with 60 multiple-choice questions to attract deeper learning and understanding of the topics studied.
