The Electronic Design Automation Handbook Dirk Jansen, 2010-02-23 When I attended college we studied vacuum tubes in our junior year At that time an average radio had ve vacuum tubes and better ones even seven Then transistors appeared in 1960s A good radio was judged to be one with more thententransistors Later good radios had 15 20 transistors and after that everyone stopped counting transistors Today modern processors runing personal computers have over 10 million transistors and more millions will be added every year The difference between 20 and 20M is in complexity methodology and business models Designs with 20 tr sistors are easily generated by design engineers without any tools whilst designs with 20M transistors can not be done by humans in reasonable time without the help of Prof Dr Gajski demonstrates the Y chart automation This difference in complexity introduced a paradigm shift which required sophisticated methods and tools and introduced design automation into design practice By the decomposition of the design process into many tasks and abstraction levels the methodology of designing chips or systems has also evolved Similarly the business model has changed from vertical integration in which one company did all the tasks from product speci cation to manufacturing to globally distributed client server production in which most of the design and manufacturing tasks are outsourced **Reeds Vol 16:**

Electrical Power Systems for Marine Engineers Gordon Boyd, Fred Taylor, 2020-10-01 Within the marine and offshore industry there is a clear and growing need for increased training and education on the use of electrical power systems The number of electrical plant and appliances now in service has grown at an alarming rate in recent years as has the amount of electrical power generated and utilised on board Large passenger ships now carry as many electrical officers as marine engineers and electrical propulsion is now in common use by LNG carriers small parcel tankers oil tankers ferries offshore support the navy fleet auxiliary cable layers and cruise ships A number of shipping companies now award the Chief Electro Technical Officer the equivalent rank to the ship s master and Chief Engineer These developments have resulted in the establishment of a Foundation Degree programme for Electro Technical Officers and the current development of full degree programmes As such a targeted textbook for students on the subject is required As with all titles in the Reeds Marine Engineering Series this book will be written in clear accessible language so as to be of use to all students and particularly those for whom English isn t their first language Technical drawings and diagrams will be used throughout and each chapter will be accompanied by example examination questions
