groundbreaking book that exposes why maths education is in crisis worldwide and how the only fix is a fundamentally new mainstream subject. It argues that today's maths education is not working to elevate society with modern computation, data science, and AI. Instead, students are subjugated to compete with what computers do best and lose. This is the only book to explain why being bad at maths may be as much the subject's fault as the learner's, how a stuck educational ecosystem has students, parents, teachers, schools, employers, and policymakers running in the wrong direction to catch up with real world requirements. But it goes further too for the first time setting out a completely alternative vision for a core computational school subject to fix the problem and seed more general reformation of education for the AI age. *Key Maths GCSE*, 2002

Educators need to empower learners to be prepared for the Fourth Industrial Revolution to be thinkers with the ability to pioneer the future. This book cracks teaching and learning myths that led to learners being perceived as knowledge duplicators instead of being knowledge creators. Thinking tools move the focus of learning from mastering content to critical thinking. This requires the critical thinking toolkit which is the mothership of all thinking. It engages learners, forever wandering minds with the learning task at hand which is the substitute for the traditional expectations of paying attention and memorising. When employing thinking tools, learners become thinking engineers taking ownership of what they must discover, create or solve. Within this paradigm of teaching, teachers directly engage with learners' brains which goes beyond learner-centred teaching and defining learning as visual, auditory, or kinaesthetic. The book is based on examples of thinking tools sessions. *Examcart NDA/NA Maths & GAT 36 Chapter-wise Solved Papers for 2024 Exam in English*, Examcart Experts, **JEE Main Maths - Unit wise Practice Test Papers**, Career Point Kota, 2020-07-20
