**Carbon-13 NMR Spectral Problems** Robert B. Bates, William A. Beavers, 2012-12-06 With the advent of Fourier transform spectrometers of great sensitivity it has become practical to obtain carbon 13 nuclear magnetic resonance C 13 NMR  $^{13}\text{C}$  NMR CMR spectra routinely on organic molecules and this technique has become one of the highest utility in determining structures of organic unknowns When the usual spectrometric techniques proton magnetic resonance  $^1\text{H}$  NMR  $^1\text{H}$  NMR PMR infrared IR mass MS and ultraviolet UV do not readily reveal a compound's structure a C 13 NMR spectrum will often provide sufficient additional information to yield it unequivocally With this in mind the present work was designed to give advanced undergraduates graduate students and practicing chemists a working knowledge of and facility with the use of this valuable technique Some familiarity with other spectrometric techniques is assumed recommended book Silverstein Bassler and Morrill Spectrometric Identification of Organic Compounds but no prior knowledge of C 13 NMR which is treated very lightly if at all in the widely used elementary organic texts is necessary A discussion of C 13 NMR spectroscopy is followed by 125 problems each consisting of a molecular formula two types of C 13 NMR spectra partially and completely proton decoupled with connecting lines to facilitate multiplicity assignments an integrated  $^1\text{H}$  NMR spectrum and the most important IR UV and MS data These problems have been very

carefully prepared thoroughly tested by students at the University of Arizona and we believe that very few errors remain
