

All answers should be found in workbook or IAN (interactive notebook).

1. Know the following terms: (most are included in the crossword)

Weathering, erosion, mechanical weathering, abrasion, ice wedging, chemical weathering, oxidation, acid rain, permeable, bedrock, humus, soil, fertility, loam, soil horizon, topsoil, subsoil, litter, decomposers, sod, natural resource, Dust Bowl, soil conservation, contour plowing, conservation plowing, crop rotation

2. What is the difference between weathering and erosion? Weathering is the breaking down of rock and erosion is the movement of rock particles
3. 5 causes of mechanical weathering: Abrasion, plant growth, release of pressure, animal actions, ice wedging/freezing and thawing
4. 5 causes of chemical weathering: Water, oxygen, carbon dioxide, living organisms, acid rain
5. Factors that affect the rate of weathering—in which type of climate would you expect to find more weathering? Which rock weathers faster? Climate and type of rock; wet and warm/hot climate would have more weathering; marble weathers faster than granite
6. 5 components of soil: Rock particles, minerals, decayed organic material, water and air
7. How does soil form? Which layer forms first? Which layer forms next? Which layer forms last? When rock is exposed, it can be weathered; weathered bedrock is the first step—this is horizon C; then seeds get dropped between the sediment and begin to sprout; over time these plants decay and return their nutrients to the soil, creating the topsoil, or horizon A; after years of more and more topsoil, the subsoil is formed as clay and other particles are washed down from the topsoil—this is horizon B
8. How do scientists classify the type of soil? Climate, type of plants, and soil composition
9. What soil type is where we live? Be able to recognize other soil types. Southern forest soil; tundra, mountain, prairie, desert
10. What is the role of living organisms in the soil? Some burrow and make spaces for air and water; others mix the soil; and decomposers break down the organic matter to return nutrients to the soil
11. List some organisms involved in the formation of soil. Earthworms, chipmunks, mice, bacteria, fungi, insects, plant roots, leaves and stems...
12. Why is soil a natural resource? All living things depend on it for survival
13. How does soil lose its fertility? By planting too much of the same crop, depleting (or using up) the soil's nutrients
14. Who was George Washington Carver? Scientist who worked with farmers and promoted soil conservation (he also encouraged them to grow peanuts to replenish the nutrients in the soil—he experimented with peanuts and other crops to find many uses for the farmers' crops)
15. What happened during the Dust Bowl? Plants had been plowed, exposing the soil; drought dried it up, and wind storms blew it away—it taught us the value of conserving the soil

Teacher's Guide to Using the Next Generation Science Standards With Gifted and Advanced Learners Cheryll M. Adams, Alicia Cotabish, Debbie Dailey, 2021-09-23 A Teacher's Guide to Using the Next Generation Science Standards With Gifted and Advanced Learners provides teachers and administrators with practical examples of ways to build comprehensive coherent and rigorous science learning experiences for gifted and advanced students from kindergarten to high school. It provides an array of examples across the four domains of science: physical sciences, Earth and space sciences, life sciences, and engineering technology and applications of science. Each learning experience indicates the performance expectation addressed and includes a sequence of activities, implementation examples, connections to the CCSS Math and CCSS ELA, and formative assessments. Chapters on specific instructional and management strategies, assessment, and professional development suggestions for implementing the standards within the classroom will be helpful for both teachers and administrators.

Paleosols and weathering through geologic time Juergen Reinhardt, Wayne R. Sigleo, 1988 *The Soils of Aotearoa New Zealand* Allan E. Hewitt, Megan R. Balks, David J. Lowe, 2021-02-19 This book offers an introduction to the soils of Aotearoa New Zealand structured according to the New Zealand soil classification system. Starting with an overview of the importance and distribution of New Zealand soils, it subsequently provides essential information on each of the 15 New Zealand soil orders in separate chapters. Each chapter, illustrated with diagrams and photographs in colour, includes a summary of the main features of the soils in the order, their genesis and relationships with landscapes, their key properties, including examples of physical and chemical characteristics, and their classification, use, and management. The book then features a chapter on soils in the Ross Sea region of Antarctica and concludes by considering New Zealand soils in a global context, soil formation pathways, and methods used in New Zealand to evaluate soils and assist in land management decisions.
