Hummel,Thomas A. Miller,2012-12-06 Insects as a group occupy a middle ground in the biosphere between bacteria and viruses at one extreme amphibians and mammals at the other The size and general nature of insects present special problems to the student of entomology For example many commercially available instruments are geared to measure in grams while the forces commonly encountered in studying insects are in the milligram range Therefore techniques developed in the study of insects or in those fields concerned with the control of insect pests are often unique Methods for measuring things are common to all sciences Advances sometimes depend more on how something was done than on what was measured indeed a given field often progresses from one technique to another as new methods are discovered developed and modified Just as often some of these techniques find their way into the classroom when the problems involved have been sufficiently ironed out to permit students to master the manipulations in a few laboratory periods Many specialized techniques are confined to one specific research laboratory Although methods may be considered commonplace where they are used in another context even the simplest procedures may save considerable time It is the purpose of this series 1 to report new developments in methodology 2 to reveal sources of groups who have dealt with and solved particular entomo

logical problems and 3 to describe experiments which may be applicable for use in biology laboratory courses

Modelling of Convective Heat and Mass Transfer in Rotating Flows Igor V. Shevchuk, 2015-07-24 This monograph presents results of the analytical and numerical modeling of convective heat and mass transfer in different rotating flows caused by i system rotation ii swirl flows due to swirl generators and iii surface curvature in turns and bends Volume forces i e centrifugal and Coriolis forces which influence the flow pattern emerge in all of these rotating flows The main part of this work deals with rotating flows caused by system rotation which includes several rotating disk configurations and straight pipes rotating about a parallel axis Swirl flows are studied in some of the configurations mentioned above Curvilinear flows are investigated in different geometries of two pass ribbed and smooth channels with 180 bends The author demonstrates that the complex phenomena of fluid flow and convective heat transfer in rotating flows can be successfully simulated using not only the universal CFD methodology but in certain cases by means of the integral methods self similar and analytical solutions The book will be a valuable read for research experts and practitioners in the field of heat and mass transfer
