Biology Neil A. Campbell, Jane B. Reece, 2005 Neil Campbell and Jane Reece's BIOLOGY remains unsurpassed as the most successful majors biology textbook in the world. This text has invited more than 4 million students into the study of this dynamic and essential discipline. The authors have restructured each chapter around a conceptual framework of five or six big ideas. An Overview draws students in and sets the stage for the rest of the chapter; each numbered Concept Head announces the beginning of a new concept, and Concept Check questions at the end of each chapter encourage students to assess their mastery of a given concept. New Inquiry Figures focus students on the experimental process, and new Research Method Figures illustrate important techniques in biology. Each chapter ends with a Scientific Inquiry Question that asks students to apply scientific investigation skills to the content of the chapter.

Plant Biotechnology and Agriculture Arie Altman, Paul Michael Hasegawa, 2012 As the oldest and largest human intervention in nature, the science of agriculture is one of the most intensely studied practices. From manipulation of plant gene structure to the use of plants for bioenergy, biotechnology interventions in plant and agricultural science have been rapidly developing over the past ten years, with immense forward leaps on an annual basis. This book begins by laying the foundations for plant biotechnology by outlining the biological aspects, including gene structure and expression, and the basic procedures in plant biotechnology of genomics, metabolomics, transcriptomics, and proteomics. It then focuses on a discussion of the impacts of biotechnology on plant breeding technologies and germplasm sustainability. The role of biotechnology in the improvement of agricultural traits, production of industrial products and pharmaceuticals, as well as biomaterials and biomass, provide a historical perspective and a look to the future. Sections addressing intellectual property rights and sociological and food safety issues round out the holistic discussion of this important topic. Includes specific emphasis on the interrelationships between basic plant biotechnologies and applied agricultural applications and the way they contribute to each other. Provides an updated review of the major plant biotechnology procedures and techniques, their impact on novel agricultural development, and crop plant improvement. Takes a broad view of the topic with discussions of practices in many countries.
