Morphological Plant Modeling: Unleashing Geometric and Topological Potential within the Plant Sciences Alexander Bucksch, Dan Chitwood, 2017-10-13 An increasing population faces the growing demand for agricultural products and accurate global climate models that account for individual plant morphologies to predict favorable human habitat Both demands are rooted in an improved understanding of the mechanistic origins of plant development Such understanding requires geometric and topological descriptors to characterize the phenotype of plants and its link to genotypes However the current plant phenotyping framework relies on simple length and diameter measurements which fail to capture the exquisite architecture of plants The Research Topic Morphological Plant Modeling Unleashing Geometric and Topological Potential within the Plant Sciences is the result of a workshop held at National Institute for Mathematical and Biological Synthesis NIMBioS in Knoxville Tennessee From 2 4 September 2015 over 40 scientists from mathematics computer science engineering physics and biology came together to set new frontiers in combining plant phenotyping with recent results from shape theory at the interface of geometry and topology In doing so the Research Topic synthesizes the views from multiple disciplines to reveal the potential of new mathematical concepts to analyze and quantify the relationship between morphological plant features As such the Research Topic bundles examples of new mathematical techniques including persistent homology graph theory and shape statistics to tackle questions in crop breeding developmental biology and vegetation modeling The challenge to model plant morphology under field conditions is a central theme of the included papers to address the problems of climate change and food security that require the integration of plant biology and mathematics from geometry and topology research applied to imaging and simulation techniques The introductory white paper written by the workshop participants identifies future directions in research education and policy making to integrate biological and mathematical approaches and to strengthen research at the interface of both disciplines

Plant Cell Walls Nicholas C. Carpita, Malcolm Campbell, Mary Tierney, 2012-12-06 This work is a comprehensive collection of articles that cover aspects of cell wall research in the genomic era Some 2500 genes are involved in some way in wall biogenesis and turnover from generation of substrates to polysaccharide and lignin synthesis assembly and rearrangement in the wall Although a great number of genes and gene families remain to be characterized this issue provides a census of the genes that have been discovered so far The articles comprising this issue not only illustrate the enormous progress made in identifying the wealth of wall related genes but they also show the future directions and how far we have to go As cell walls are an enormously important source of raw material we anticipate that cell wall related genes are of significant economic importance Examples include the modification of pectin cross linking or cell cell adhesion to increase shelf life of fruits and vegetables the enhancement of dietary fiber contents of cereals the improvement of yield and quality of fibers and the relative allocation of carbon to wall biomass for use as biofuels The book is intended for academic and professional scientists working in the area of plant biology as well as material chemists and engineers and food scientists who define new ways to use cell walls

Sample Preparation Handbook for Transmission Electron Microscopy Jeanne Ayache, Luc Beaunier, Jacqueline Boumendil, Gabrielle Ehret, Danièle Laub, 2010-07-03 Successful transmission electron microscopy in all of its manifestations depends on the quality of the specimens examined Biological specimen preparation protocols have usually been more rigorous and time consuming than those in the physical sciences For this reason there has been a wealth of scientific literature detailing specific preparation steps and numerous excellent books on the preparation of biological thin specimens This does not mean to imply that physical science specimen preparation is trivial For the most part most physical science thin specimen preparation protocols can be executed in a matter of a few hours using straightforward steps Over the years there has been a steady stream of papers written on various aspects of preparing thin specimens from bulk materials However aside from several seminal textbooks and a series of book compilations produced by the Material Research Society in the 1990s no recent comprehensive books on thin specimen preparation have appeared until this present work first in French and now in English Everyone knows that the data needed to solve a problem quickly are more important than ever A modern TEM laboratory with supporting SEMs light microscopes analytical spectrometers computers and specimen preparation equipment is an investment of several million US dollars Fifty years ago electropolishing chemical polishing and replication methods were the principal specimen preparation methods

Plant Specialized Metabolisms: Physiological Responses and Molecular Mechanisms Weiwei Zhang, Xiaomeng Liu, Feng Xu, Moonhyuk Kwon, 2025-08-07 Plant specialized metabolites are small molecules or organic compounds such as flavonoids quinones terpenoids alkaloids and phenolic compounds produced by plants They play a role in plant adaptation to the environment such as defending against predators and pests helping with pollination and providing protection against UV damage Some specialized metabolites also have certain physiological activities and pharmacological effects which are of great significance for the prevention and treatment of human tumors aging and cardiovascular diseases The distribution of specialized metabolites in plants is usually unique to species organs tissues and growth stages which leads to complex and diverse biosynthetic pathways of specialized metabolites The synthesis of plant specialized metabolites is controlled by genetic material and regulated by a variety of biotic and abiotic factors in the environment
