Research and Practice in

Education Cynthia E. Coburn, Mary Kay Stein, 2010-04-16 That there is a divide between research and practice is a common lament across policy oriented disciplines and education is no exception Rhetoric abounds about the role research plays or does not play in the improvement of schools and classrooms and policy makers push solutions that are rooted in assumptions about the way that research should influence practice Yet few people have studied the relationship between research and practice empirically This book presents findings from a series of interlocking case studies of nationally visible R D projects with a unique focus on how researchers and practitioners actually worked together and the policy social and institutional processes that either enabled or hindered their work The book investigates the dynamics of cross institutional collaboration and the relationship between tool design teacher learning and the implementation of research based approaches It also explores conditions for learning in schools and the role of evidence in district decision making By investigating the roles played by research and practice in these ten educational improvement efforts the book illuminates lessons for those who seek to do this kind of work in the future It concludes by suggesting implications for designers funders school and district leaders and universities

Beyond the Bubble Test Linda Darling-Hammond, Frank Adamson, 2014-06-16 Performance assessment is a hot topic in school systems and educators continue to analyze its costs benefits and feasibility as a replacement for high stakes testing Until now researchers and policymakers have had to dig to find out what we know and what we still have to learn about performance assessment Beyond the Bubble Test How Performance Assessments Support 21st Century Learning synthesizes the latest findings in the field and not a moment too soon Statistics indicate that the United States is in danger of falling behind if it fails to adapt to our changing world The memory and recall strategies of traditional testing are no longer adequate to equip our students with the skills they need to excel in the global economy Instead teachers need to engage students in deeper learning assessing their ability to use higher order skills Skills like synthesizing information understanding evidence and critical problem solving are not achieved when we teach to multiple choice exams Examples in Beyond the Bubble Test paint a useful picture of how schools can begin to supplement traditional tests with something that works better This book provides new perspectives on current performance assessment research plus an incisive look at what is possible at the local and state levels Linda Darling Hammond with a team of leading scholars bring together lessons learned new directions and solid recommendations into a single readily accessible compendium Beyond the Bubble Test situates the current debate on performance assessment within the context of testing in the United States This comprehensive resource also looks beyond our U S borders to Singapore Hong Kong and other places whose reform mindedness can serve as an example to us

No One Left Standing Michele Wages, 2016-11-14 Every public school student in the U S will experience various types of testing each year For decades the purpose and quality of such testing the time it takes to administer and take the test and how the data is used are the topic of discussion among students parents educators and policymakers Those supporting the importance of testing assume that more assessment improves student achievement and that the pros of

testing outweigh their perceptions of the additional costs Those against excessive testing believe that schools are sacrificing learning time in order to test or prepare for the test They also believe that reduced learning time of non tested subjects occurs and more time is given to those students that are performing right below the proficiency score or bubble kids instead of developing every student s full potential Testing in U S public schools is out of control The stress and pressures for all involved have effects that are not even measurable in most instances Is this really the best thing for our schools Are there alternative measures that may serve our future in a better way Will the rewrite of NCLB be enough California Jeff Cummins,David G. Urbanization and Affordances that Promote Well-Being for (Urban) People and for a Healthy Biosphere Stephan Barthel, Marketta Kyttä, 2020-01-30 The world is urbanizing at an unprecedented rate It is estimated that in the near future urban landscapes for another ca 2.7 billion people will be built on planet Earth approximately converting land equivalent to the size of South Africa Such land conversion coupled with citizen densification increasing inequalities shifting diets and emerging technologies challenge human well being and pose ever increasing demand for resources generated by the Biosphere This Research Topic concentrates on the various ways urbanization can promote individual well being mental physical and social health as well as ecological health a healthy Biosphere What kind of affordances for human health promotion can urbanization include What kinds of affordances for a psychological connection with nature can urbanization include What kinds of nudges for pro environmental behavior and consumption decreasing detrimental consumption behaviors can be actively designed in urban settings The Research Topic at hand uses a transactional approach where an affordance can be understood as a non deterministic in situ precondition for a human activity enabled by relations between abilities of an individual with features of an environment We encourage a broad definition of the concept of affordances where the environment must not be restricted to the material biophysical environment alone but also could be combined with social immaterial features We see that the transactional approach of this Research Topic posits that meaning arises in relations

between humans and their environment that it will be equally applicable to natural and designed environments and that it doesn't regard dichotomies like city contra nature or social contra ecological. Hence this Research Topic is interested in if the transactional approach can be used as a conceptual tool not only for promotion of mental, physical and social health in cities but simultaneously for unraveling relations at the micro scale in cities which can be used for solutions that also promote a healthy Biosphere.
