

3.3 Energy Flow in Ecosystems

Lesson Objectives

-  Trace the flow of energy through living systems.
-  Identify the three types of ecological pyramids.

Lesson Summary

Food Chains and Food Webs Energy flows through an ecosystem in one direction from primary producers to various consumers.

- ▶ A **food chain** is a series of steps in which organisms transfer energy by eating and being eaten. Producers, such as floating algae called **phytoplankton**, are at the base of every food chain.
- ▶ A **food web** is a network of all the food chains in an ecosystem. Food webs are very complex. Small disturbances to one population can affect all populations in a food web. Changes in populations of **zooplankton**, small marine animals that feed on algae, can affect all of the animals in the marine food web.

Trophic Levels and Ecological Pyramids Each step in a food chain or food web is called a **trophic level**. Producers make up the first trophic level. Consumers make up higher trophic levels. Each consumer depends on the trophic level below it for energy. An **ecological pyramid** is a diagram that shows the relative amounts of energy or matter contained within each trophic level in a food chain or food web. Types of ecological pyramids are pyramids of energy, pyramids of biomass, and pyramids of numbers:

- ▶ Pyramids of energy show relative amounts of energy available at different trophic levels.
- ▶ Pyramids of **biomass** show the total amount of living tissue at each trophic level.
- ▶ A pyramid of numbers shows the relative numbers of organisms at different trophic levels.
