Tonio Schoenfelder ,Tom Schaal,Anja Mocek,2024-11-12 Digital health applications DHAs are increasingly being used in patient care in various healthcare systems around the world In some countries such as Belgium and Germany legal frameworks already allow for

DHA integration into standard care and their prescription and uniform reimbursement via the patient's health insurance. In many other European countries and the USA such a process is still in development. DHAs are primarily used by patients themselves but also in consultation with physicians, therapists or other healthcare providers. They offer the potential for improved health outcomes and increased access to health services especially in rural areas and may lead to an overall improvement in the quality of care. The validity of studies on the effects of DHAs on patients and health care systems in general is currently limited since study methods applied do often not allow for drawing causal relationships and most studies focus only on patient outcomes but do not assess how traditional care processes need to be adapted so that DHAs can be effective. Therefore unambiguous evidence on which patient relevant outcomes can be improved specifically as a result of integrating DHA into the process of care is currently lacking.

This collection of new empirical studies on the acquisition of Spanish morphosyntax by leading researchers in the field of language acquisition specifically contributes to the characterization of the L1 L2 connection in acquisition. Using L1 and L2 Spanish data from children and adults the authors seek to address the central questions that have occupied developmental psycholinguists in the final decades of the previous century and that will no doubt continue engaging them into the present one.
